

True Potential Balanced Portfolio

31st August 2026

Portfolio Objective

The objective of the True Potential Balanced Portfolio is to provide investors with a way to achieve their investment goals. The Portfolio offers full exposure to different manager styles within the Balanced risk profile. We review the Portfolio monthly and, if necessary, rebalance to the allocation of styles that we believe offers the best opportunity for growth within the Balanced risk profile. The Portfolio aims to produce a higher risk-adjusted outcome at a lower average cost, compared to an equally-weighted model of Balanced funds.

Risk and Reward Profile

The Balanced Investor may be somewhat concerned with short-term losses and may shift to a more stable option in the event of significant losses. The safeties of investment and return are typically of equal importance to the Balanced Investor.

Investment Commentary

The True Potential Balanced Portfolio returned +2.29% in August 2026.

Global equities were positive, led by Emerging Markets, Japan and US technology, while European equities reached record highs. Bond yields fell on softer US data. Credit rose, High Yield outperformed, and gold gained. Oil volatility and Sterling strength were headwinds, but gains across equities, gold and credit markets outweighed mixed alternative investment returns.

True Potential Pictet and Schroders Balanced led performance. Pictet benefited from higher equity exposure, especially robotics, Emerging Markets and Japan, with gold and commodities also supportive. Schroders was driven by commodities, gold and Emerging Markets and Asia exposure.

There were no active changes to Portfolio allocations during the month, as the team remained confident the Portfolio stayed within its target risk parameters and aligned with our house view. Managers refined positioning, adding gold, trimming Schroders' Emerging Market technology exposure, and selectively increasing US inflation-linked bonds for attractive real yields. These changes remain consistent with our outlook and demonstrate managers actively seeking opportunities while maintaining disciplined risk management.

Growth of hypothetical £10,000 invested since inception

Why invest in this Portfolio?

- For investors looking to invest for the long term (5 years or more).
- Diversifies risk by investing in stocks, bonds, and alternative investments.
- The balanced approach of the fund strives to provide both growth and income, while managing short-term losses through a diversified mix of assets that moderate risk.
- Investors are able to bear losses to capital without creating significant financial hardship.

With investing, your capital is at risk. Investments can fluctuate in value and you may get back less than you invest. Past performance is not a guide to future performance. This factsheet is not personal financial advice.

Key Fund Information

Portfolio Details	
Launch Date	1st October 2015
Ongoing Charge Figure (OCF)*	0.78%
Portfolio Size	£10,701m
Minimum Recommended Holding Period	5 years

*OCF payable can fluctuate over time as the underlying investments are variable and can change.

Personal dividend tax charges may still apply and is subject to individual circumstances. Tax rules may change in the future.

In September 2024, the FCA updated its Packaged Retail Insurance and Investment Products (PRIIPS) guidance on how we disclose costs for closed-ended funds like investment trusts. This change is designed to give you a clearer picture of the actual costs that impact your investments. As a result, some of our fund OCFs (Ongoing Charges Figure) have significantly decreased, reflecting only the costs that directly affect the fund's assets.

What are the fees associated with investing in this Portfolio?

The OCF of this Portfolio is currently 0.78%. This means that if you invest £1000 in the Portfolio, you can expect to pay £7.80 in fees over the course of a year. The fees you pay are pro-rata. If you hold the Portfolio for less than a year you will only pay the proportional amount of fees applicable (based on the duration of your investment).

Risks

The following are some of the key risks associated with investing in this Portfolio. For a complete list of risks, please refer to each Fund's prospectus, available at www.truepotential.co.uk/fund-documents. Please be aware that there is no guarantee that capital will be preserved.

Risk Type	Description
Performance Risk	Investment objectives express an intended result but there is no guarantee that such a result will be achieved. Depending on market conditions and the macro-economic environment, certain investment types and styles may perform better than others and investment objectives may become more difficult to achieve. Whilst different investment types and styles are used, growth cannot be guaranteed.
Counterparty Risk	There may be cases where the organisation from which we buy a derivative, or an asset, fails to meet its obligations. The cash deposits of the underlying funds are also subject to counterparty risk.
Emerging Market Risk	Investments in emerging markets may involve greater risks due to political and economic instability, and underdeveloped markets and systems.
Derivative Risk	The Portfolio holds funds entitled to use derivatives. Derivatives may not achieve their intended purpose. Their prices may move up or down significantly over relatively short periods of time which may result in losses greater than the amount paid.
Operational Risk	The Portfolio faces non-market risk, relating to purchasing, holding and servicing the Portfolio's assets.
Credit Risk	Where the underlying Fund invests in bonds, there is a risk the bond issuer may fail to meet its repayments. Changes in interest rates, inflation and the creditworthiness of the bond issuer may also affect the bond's market value. This risk is particularly relevant where the Fund invests in bonds with a lower credit rating.
Exchange Rate Risk	The underlying funds may invest in securities not denominated in GBP. The value of your investments may be affected by changes in currency exchange rates.
Liquidity Risk	Certain market conditions could make sufficiently liquid assets difficult to sell quickly at a fair price. This could result in an unpredictable fall in the value, and overall liquidity of the funds held within the Portfolio.
Investment Trust Risk	Investment trusts and closed ended funds may borrow to purchase additional investments. This can increase returns when stock markets rise but will magnify losses when markets fall. The value of an investment trust or a closed-ended fund moves in line with stock market demand and its share price may be less than or more than the net value of the investments it holds.
