

True Potential Growth Portfolio

31st December 2025

Portfolio Objective

The objective of the True Potential Growth Portfolio is to provide investors with a way to achieve their investment goals. The Portfolio offers full exposure to different manager styles within the Capital Growth risk profile. We review the Portfolio monthly and, if necessary, rebalance to the allocation of styles that we believe offers the best opportunity for growth within the Capital Growth risk profile. The Portfolio aims to produce a higher risk-adjusted outcome at a lower average cost, compared to an equally-weighted model of Capital Growth funds.

Risk and Reward Profile

Defensive	Cautious	Balanced	Growth	Aggressive
Lower Risk Potentially Lower Rewards			Higher Risk Potentially Higher Rewards	

The Growth Investor may be willing to accept high risk and chance of loss in order to achieve higher returns on his or her investment. Significant losses over an extended period may prompt the Growth Investor to shift to a less risky investment.

Investment Commentary

The True Potential Growth Portfolio returned +0.70% in December 2025.

Global equities delivered a +1.1% gain (MSCI ACWI, local) in December. Emerging markets led performance, with Korea up +7% and Taiwan +5%, rounding off an exceptional year. In contrast, US equities were flat, underperforming other regions by 2%, despite the Federal Reserve cutting interest rates and corporates maintaining a robust profit outlook.

Global government bonds rose +0.1% and UK Gilts edged +0.2% higher. Corporate credit posted modest gains, with Global High Yield up 1.0%. Gold continued its strong run, rising +1.9%, while the US dollar weakened (-1.1%) against Sterling and the Euro.

Portfolio returns were supported by an overweight allocation to True Potential Growth-Aligned, which benefitted from tilts into UK, Europe, and EM. Active manager selection and favouring UK Gilts over US Treasuries also helped. Allocation to Allianz was also positive, driven by a more globally diversified equity book as well as exposure to gold and commodities. TrinityBridge lagged due to its US equity bias and weak tech performance.

No manager allocation changes were made this month, as we believe current positioning remains optimal. Key changes from managers include UBS rotating from US to European equities and increasing gold exposure and Growth Aligned rotating US equities into World Value.

Growth of hypothetical £10,000 invested since inception

Why invest in this Portfolio?

- For investors looking to invest for the long term (5 years or more).
- Diversifies risk by investing in stocks, bonds, and alternative investments.
- The fund's growth risk profile seeks to achieve strong capital appreciation over time, understanding that short-term volatility may lead to temporary losses.
- Investors are able to bear losses to capital without creating significant financial hardship.

With investing, your capital is at risk. Investments can fluctuate in value and you may get back less than you invest. Past performance is not a guide to future performance. This factsheet is not personal financial advice.

Key Fund Information

Portfolio Details	
Launch Date	1st October 2015
Ongoing Charge Figure (OCF)*	0.70%
Portfolio Size	£6,369m
Minimum Recommended Holding Period	5 years

*OCF payable can fluctuate over time as the underlying investments are variable and can change.

Personal dividend tax charges may still apply and is subject to individual circumstances. Tax rules may change in the future.

In September 2024, the FCA updated its Packaged Retail Insurance and Investment Products (PRIIPS) guidance on how we disclose costs for closed-ended funds like investment trusts. This change is designed to give you a clearer picture of the actual costs that impact your investments. As a result, some of our fund OCFs (Ongoing Charges Figure) have significantly decreased, reflecting only the costs that directly affect the fund's assets.

What are the fees associated with investing in this Portfolio?

The OCF of this Portfolio is currently 0.70%. This means that if you invest £1000 in the Portfolio, you can expect to pay £6.96 in fees over the course of a year. The fees you pay are pro-rata. If you hold the Portfolio for less than a year you will only pay the proportional amount of fees applicable (based on the duration of your investment).

Risks

The following are some of the key risks associated with investing in this Portfolio. For a complete list of risks, please refer to each Fund's prospectus, available at www.truepotential.co.uk/fund-documents. Please be aware that there is no guarantee that capital will be preserved.

Risk Type	Description
Performance Risk	Investment objectives express an intended result but there is no guarantee that such a result will be achieved. Depending on market conditions and the macro-economic environment, certain investment types and styles may perform better than others and investment objectives may become more difficult to achieve. Whilst different investment types and styles are used, growth cannot be guaranteed.
Counterparty Risk	There may be cases where the organisation from which we buy a derivative, or an asset, fails to meet its obligations. The cash deposits of the underlying funds are also subject to counterparty risk.
Emerging Market Risk	Investments in emerging markets may involve greater risks due to political and economic instability, and underdeveloped markets and systems.
Derivative Risk	The Portfolio holds funds entitled to use derivatives. Derivatives may not achieve their intended purpose. Their prices may move up or down significantly over relatively short periods of time which may result in losses greater than the amount paid.
Operational Risk	The Portfolio faces non-market risk, relating to purchasing, holding and servicing the Portfolio's assets.
Credit Risk	Where the underlying Fund invests in bonds, there is a risk the bond issuer may fail to meet its repayments. Changes in interest rates, inflation and the creditworthiness of the bond issuer may also affect the bond's market value. This risk is particularly relevant where the Fund invests in bonds with a lower credit rating.
Exchange Rate Risk	The underlying funds may invest in securities not denominated in GBP. The value of your investments may be affected by changes in currency exchange rates.
Liquidity Risk	Certain market conditions could make sufficiently liquid assets difficult to sell quickly at a fair price. This could result in an unpredictable fall in the value, and overall liquidity of the funds held within the Portfolio.
Investment Trust Risk	Investment trusts and closed ended funds may borrow to purchase additional investments. This can increase returns when stock markets rise but will magnify losses when markets fall. The value of an investment trust or a closed-ended fund moves in line with stock market demand and its share price may be less than or more than the net value of the investments it holds.
