Report of the Authorised Corporate Directors ('ACD')*

True Potential Administration (trading name of True Potential Administration LLP), as ACD, presents herewith the True Potential OEIC 3 Interim Report for the period ended 31 October 2025.

True Potential OEIC 3 ('the Company') is an authorised open-ended investment company with variable capital ('ICVC') further to an authorisation order dated 28 April 2016. The Company is incorporated under registration number IC001060. It is a UK UCITS scheme complying with the investment and borrowing powers rules in the Collective Investment Schemes sourcebook ('COLL'), as published by the Financial Conduct Authority ('FCA').

The Company was founded as an umbrella company. An unlimited number of Sub-Funds may be included in the umbrella and the ACD may create additional Sub-Funds with the approval of the Depositary and of the FCA. The Sub-Funds represent segregated portfolios of assets and, accordingly, the assets of a Sub-Fund belong exclusively to that Sub-Fund and shall not be used or made available to discharge (indirectly or directly) the liabilities of claim against, any other person or body, and any other Sub-Fund and shall not be available for any such purpose.

The ACD is of the opinion that it is appropriate to continue to adopt the going concern basis in the preparation of the financial statements as the assets of the Company consist predominantly of securities which are readily realisable and, accordingly, the Company has adequate financial resources to continue in operational existence for the foreseeable future. Further, appropriate accounting policies, consistently applied and supported by reasonable and prudent judgements and estimates, have been used in the preparation of these financial statements and applicable accounting standards have been followed.

The shareholders are not liable for the debts of the Company.

The Company has no Directors other than the ACD.

The base currency of the Company is UK sterling.

The Instrument of Incorporation can be inspected at the offices of the ACD.

Copies of the Prospectus and Key Investor Information Documents ('KIIDs') are available on request free of charge from the ACD.

Cross holdings

In the reporting period, no Sub-Fund held shares of any other Sub-Fund in the umbrella.

Investment objective and policy

The investment objective and policy of each Sub-Fund is disclosed within the Investment Manager's report of the individual Sub-Funds.

Sub-Funds

There are currently 9 Sub-Funds available in the Company:

True Potential Allianz Cautious

True Potential Allianz Balanced

True Potential Allianz Growth

True Potential Growth-Aligned Defensive

True Potential Growth-Aligned Cautious

True Potential Growth-Aligned Balanced

True Potential Growth-Aligned Growth

True Potential Growth-Aligned Aggressive

True Potential Global Managed

* These items along with each Fund's Investment Manager's report, the Portfolio changes and the Portfolio statement, the Risk and reward profile collectively constitute the Authorised Corporate Director's Report in accordance with the Collective Investment Schemes Sourcebook.

Changes affecting the Company in the period

As of 4 June 2025, the investment policy and objective of the True Potential Allianz Balanced, True Potential Allianz Cautious and True Potential Allianz Growth Sub-Funds were changed. To effect the changes each of the Sub-Funds were converted from a feeder UCITS (Feeder Fund) to a standalone UCITS Sub Fund. Details can be found in the Fund Changes Circular at <http://www.truepotential.co.uk/fund-administration/#fund-documents>.

As of 4 June 2025, the valuation point on each Dealing Day for the True Potential Allianz Balanced, True Potential Allianz Cautious and True Potential Allianz Growth Sub-Funds changed from 12 noon to 3pm.

As of 4 June 2025, the method used to calculate global exposure for the True Potential Allianz Balanced, True Potential Allianz Cautious and True Potential Allianz Growth Sub-Funds has changed from the Commitment approach to Absolute Value at Risk (VaR).

Allianz Global Investors UK Limited has been appointed as Sub-investment Manager to the Sub-Funds.

In accordance with the requirements of the Financial Conduct Authority's Collective Investment Schemes sourcebook, I hereby certify the Annual Report on behalf of the ACD, True Potential Administration LLP.

Henrietta Jowitt

Chief Executive Officer

True Potential Administration LLP

23 December 2025

Accounting policies of True Potential OEIC 3 (Unaudited)

for the six months ended 31 October 2025

The accounting policies relate to the Sub-Funds within the Company.

The financial statements have been prepared under the historical cost convention, as modified by the revaluation of investments. They have been prepared in accordance with FRS 102 the Financial Reporting Standard applicable in the UK and Republic of Ireland ('FRS 102') and in accordance with the Statement of Recommended Practice for UK Authorised Funds ('the SORP') published by the Investment Association in May 2014 (and amended in June 2017).

The accounting policies applied are consistent with those of the annual financial statements for the year ended 30 April 2025 and are described in those annual financial statements.

The ACD has considered a detailed assessment of the Sub-Funds' ability to meet their liabilities as they fall due, including liquidity, declines in global capital markets and investor redemption levels. Based on this assessment, the Sub-Funds continue to be open for trading and the ACD is satisfied the Sub-Funds have adequate financial resources to continue in operation for at least the next 12 months and accordingly it is appropriate to adopt the going concern basis in preparing the financial statements.

TPI Chief Investment Officer's Foreword and Commentary

The investment manager reports that follow are provided by True Potential Investments LLP ("the Investment Manager") and Allianz Global Investors UK Limited as appointed Sub-investment Manager.

The Investment Manager serves as the appointed investment manager for all True Potential OEIC 3 Sub-Funds, responsible for overseeing their management per investment guidelines and strategic objectives. This delegated approach aligns investment decisions with fund objectives by leveraging specialist asset manager expertise.

As part of its fiduciary responsibilities, the Investment Manager conducts: ongoing ex-ante and ex-post risk monitoring; continuous performance assessment, ensuring outcomes align with expectations and monitoring sub-manager positioning and sustainability assessments. Through this structured oversight, True Potential Investments LLP upholds the highest standards of investment management, risk control, and client asset stewardship.

Growth-Aligned operates across five multi-asset funds. True Potential Growth-Aligned Defensive, Cautious, Balanced, Growth, and Aggressive have similar underlying assets but are tilted differently to reflect their different risk orientation. Growth-Aligned applies a growth-focused and evidenced based philosophy, emphasising long-term trends, valuations and diversification when positioning the funds.

True Potential Global Managed is a single multi-asset fund. The Sub-Fund mostly utilises passive index-based instruments to focus on global diversification and macroeconomic themes. Global Managed targets medium-term growth through diversified exposure to global equity and fixed income markets, investing 40-80% in higher-risk assets.

Allianz operates three multi-asset funds. Their philosophy integrates systematic assessment with fundamental analysis for active asset allocation, aiming to capture excess returns and reduce risk. This is complemented by instrument selection, a blend of active and passive products and alpha enhancement strategies.

During the six month reporting period, markets navigated policy shifts and US-China trade talks. Global equities continued to rebound from the initial tariffs-shock, led by tech and strong earnings. Cautionary signals included a US credit downgrade (Moody's to Aa1) and economic consequences from tariffs. Central banks helped ease financial conditions and underpin future economic growth by lowering interest rates.

In this evolving environment, all sub-investment managers are positioned to benefit from a robust global economy, underpinned by strong corporate profits, disinflation and supportive fiscal and monetary policy. Allianz and Growth-Aligned continue to favour geographic diversification within equities, reflecting a preference for markets that are close to fair value and less concentrated.

True Potential Allianz Cautious

Sub-Investment Manager's report

This supplemental reporting is intended to provide you with an overview of portfolio activity during the period and should not be relied upon to make investment decisions or otherwise.

Investment Objective and Policy

The investment objective of the Sub-Fund is to achieve capital growth (generated through an increase in the value of the assets held by the Sub-Fund), over rolling 5-year periods (net of fees). Please be aware the Sub-Fund's capital is at risk and there is no guarantee that the Sub-Fund will achieve its investment objective over any particular period or at all.

The Sub-Fund seeks to achieve its objective through the active management of a multi-asset strategy, by investing at least 80% of its overall exposure in a global portfolio of equity securities (i.e. shares), equity-related securities (i.e. other investments whose value is related to equities such as derivatives), fixed income securities (i.e. bonds issued by corporates and governments), and fixed income-related securities (i.e. other investments whose value is related to debt). Investments may be made anywhere in the world including developed markets, non-developed markets, or emerging market countries.

The Sub-Fund will invest at least 50% of its assets in units or shares of other collective investment schemes such as UCITS Schemes and/or eligible non-UCITS schemes (including collective investment schemes that are exchange-traded funds) and closed-ended funds constituting transferable securities.

The Sub-Fund will be managed such that 25% to 55% of its overall exposure will relate to equity and equity-related securities, with 35% to 65% in fixed income and fixed income-related securities, including up to 10% in high-yielding bonds (being unrated bonds or those rated below investment grade (i.e. below BBB minus or equivalent) by a single external rating agency under normal market conditions).

As the Sub-Fund is permitted to use leverage (including derivatives, as described further below) to gain the above exposures, the value of these positions may be greater than the Sub-Fund's net asset value, so are measured as a proportion of the Sub-Fund's overall investment exposure. For the avoidance of doubt, the investment restrictions outlined in the paragraphs below are measured by reference to the Sub-Fund's net asset value, and not the Sub-Fund's overall investment exposure, but remain subject at all times to the investment restrictions outlined in the paragraphs above.

In seeking to achieve its investment objective and/or for liquidity purposes, the Sub-Fund may invest up to 30% of its net asset value in other assets such as money market instruments (i.e. debt securities with short term maturities), deposits, cash and cash equivalents (including deposits, treasury bills, certificates of deposit, bankers acceptances and commercial paper). The instruments detailed in this paragraph may also be used to collateralise the Sub-Fund's derivative positions.

The Sub-Fund may also gain exposure to commodities up to 10% of its net asset value, indirectly through investment in exchange-traded funds and closed-ended funds constituting transferable securities.

The collective investment schemes in which the Sub-Fund invests may be managed by the sub-investment manager or an associate of the sub-investment manager. By investing in these vehicles, the Sub-Fund may also have some limited exposure to alternative asset classes, such as (but not limited to) property, private equity, and commodities.

The Sub-Fund may use derivatives (that is financial instruments whose value derives from and is dependent on another underlying asset) for Efficient Portfolio Management purposes, including hedging. The Sub-Fund may also use derivatives, such as futures and options, for broader investment purposes to help meet its investment objective (including to gain exposure to the asset classes described above), which may increase the volatility and risk profile of the Sub-Fund.

Except as outlined above, there are no geographic, industry or sectoral restrictions on the investments of the Sub-Fund.

Performance

	Period of R&A (%)	1 yr (%)	3 yrs (%)	5 yrs (%)	Since Launch (%)
True Potential Allianz Cautious (Acc)	11.20	11.75	8.74	4.54	5.02

Past performance does not predict future returns.

Sub-Investment Manager's report (continued)

It was a particularly strong period for the Sub-Fund's performance as the unwinding of many of President Trump's tariff threats and the ongoing boom in AI investment drove double digit returns. The Sub-Fund's positions in China A and broader Emerging Market equities enjoyed a spectacular run, closely followed by US and Japanese equities. Other asset classes delivered positively too, most notably Emerging Market Debt and Gold.

Over this period the overweight positions in equity and gold added value to the portfolio. The Allianz Global Sustainability and UK Listed Opportunities funds struggled, whilst the Allianz China A Shares fund sharply outperformed the benchmark. Regarding alpha trades, the Spanish equity position and the US and German steepener positions added value, but the UK mid-cap and Hong Kong Technology trades detracted.

Sub-Investment Activities

This is for guidance only and not indicative of future allocation.

Over the period we increased the Sub-Fund's tactical equity overweight, with additions to the US, Japan, and Emerging Markets. With the impact of remaining tariffs likely to raise prices and continuing stubborn inflation prints, UK Gilt and Global Government bond positions returned to neutral. In terms of fund selection, the Allianz Global Unconstrained equity fund was exited.

With regards to new alpha trades, positions in Spanish equities (strong local growth, less exposed to geopolitical ructions) and Hong Kong Technology equities (AI beneficiaries at reasonable valuation) were introduced. Additionally, we re-introduced a 5s30s US treasury steepener, which aims to benefit from future rate cuts with question marks over the longer-term inflation outlook. Finally, a small position in Industrial metals was exited.

Market View and Outlook

Macroeconomic fundamental data remains solid, corporate earnings appear healthy, and central banks are broadly on an easing monetary path, all of which are supportive for equities. On the cautionary side, inflation has yet to return to long-term targets and labour markets have begun to show signs of softening. Our proprietary quantitative investment signals remain strong across equity regions. At the end of October, combining the fundamental and quantitative views, the Sub-Fund has an overweight to equities, with a preference for Japan, Emerging Markets, and Europe.

Conversely, the Sub-Fund has an underweight allocation to fixed income. This is driven by the underweight allocation to credit (both investment grade and high yield) – preferring to take risks in equities and Emerging Market debt. The allocation to sovereign bonds was broadly neutral.

The gold overweight remains a key position within the overall portfolio, providing defensive characteristics, and supported by central bank purchases.

Risk and reward profile

The risk and reward indicator table demonstrates where the Sub-Fund ranks in terms of its potential risk and reward. The higher the rank the greater the potential reward but the greater the risk of losing money. It is based on past data, may change over time and may not be a reliable indication of the future risk profile of the Sub-Fund. The shaded area in the table below shows the Sub-Fund's ranking on the risk and reward indicator.

The Sub-Fund is in a medium category because the price of its investments have risen or fallen to some extent. The category shown is not guaranteed to remain unchanged and may shift over time. Even the lowest category does not mean a risk-free investment.

The price of the Sub-Fund and any income from it can go down as well as up and is not guaranteed. Investors may not get back the amount invested. Past performance is not a guide to future performance.

Investment objectives express an intended result but there is no guarantee that such a result will be achieved. Depending on market conditions and the macro-economic environment, certain investment types and styles may perform better than others and investment objectives may become more difficult to achieve.

There may be cases where the organisation from which we buy a derivative, or an asset, fails to meet its obligations. The Sub-Fund's cash deposits are also subject to counterparty risk.

The Sub-Fund is entitled to use derivatives. Derivatives may not achieve their intended purpose. Their prices may move up or down significantly over relatively short periods of time which may result in losses greater than the amount paid.

The Sub-Fund faces non-market risk, relating to purchasing, holding and servicing the Sub-Fund's assets.

Where the Sub-Fund invests in bonds, there is a risk the bond issuer may fail to meet its repayments. Changes in interest rates, inflation and the creditworthiness of the bond issuer may also affect the bond's market value. This risk is particularly relevant where the Sub-Fund invests in bonds with a lower credit rating.

The Sub-Fund may invest in securities not denominated in Sterling; the value of your investments may be affected by changes in currency exchange rates.

Certain Market conditions could make sufficiently liquid assets difficult to sell quickly at a fair price. This could result in an unpredictable fall in the value, and overall liquidity of the Sub-Fund.

The above risks may cause losses in the Sub-Fund.

For further information please refer to the KIID.

For full details on risk factors for this Sub-Fund, please refer to the Prospectus.

There have been no changes to the risk and reward indicator in the period.

Task Force on Climate-Related Financial Disclosures (unaudited)

A statement on the climate related financial disclosures was published prior to 30 June 2025 at <https://www.truepotential.co.uk/fund-administration/#fund-documents>.

Comparative table

The following disclosures give a shareholder an indication of the performance of a share in the Sub-Fund. It also discloses the operating charges and direct transaction costs applied to each share. Operating charges are those charges incurred in operating the Sub-Fund and direct transaction costs are costs incurred when purchasing or selling securities in the portfolio of investments.

Lowest share price (p)	143.23	136.32	125.10	121.70

+Rounded to 2 decimal places.

++The operating charges are represented by the Ongoing Charges Figure (OCF). The OCF consists principally of the ACD's periodic charge and the Investment Manager's fee which are included in the annual management charge, but also includes the costs for other services paid. It is indicative of the charges which the share class may incur in a year as it is calculated on historical data. Included within the OCF are synthetic costs which included the OCF of the underlying funds weighted on the basis of their investment proportion.

**Management fee rate has been changed from 0.55% to 0.76% from 05 June 2025.

Investments carry risk. Past performance is not a guide to future performance. Investors may not get back the amount invested.

True Potential Allianz Balanced

Sub-Investment Manager's report

This supplemental reporting is intended to provide you with an overview of portfolio activity during the period and should not be relied upon to make investment decisions or otherwise.

Investment Objective and Policy

The investment objective of the Sub-Fund is to achieve capital growth (generated through an increase in the value of the assets held by the Sub-Fund), over rolling 5-year periods (net of fees).

Please be aware the Sub-Fund's capital is at risk and there is no guarantee that the Sub-Fund will achieve its investment objective over any particular period or at all.

The Sub-Fund seeks to achieve its objective through the active management of a multi-asset strategy, by investing at least 80% of its overall exposure in a global portfolio of equity securities (i.e. shares), equity-related securities (i.e. other investments whose value is related to equities such as derivatives), fixed income securities (i.e. bonds issued by corporates and governments) and fixed income related securities (i.e. other investments whose value is related to debt). Investments may be made anywhere in the world including developed markets, non-developed markets or emerging market countries.

The Sub-Fund will invest at least 50% of its assets in units or shares of other collective investment schemes such as UCITS Schemes and/or eligible non-UCITS schemes (including collective investment schemes that are exchange-traded funds) and closed-ended funds constituting transferable securities.

The Sub-Fund will be managed such that 40% to 70% of its overall exposure will relate to equity and equity-related securities, with 20% to 50% in fixed income and fixed income-related securities, including up to 10% in high-yielding bonds (being unrated bonds or those rated below investment grade (i.e. below BBB minus or equivalent) by a single external rating agency under normal market conditions).

As the Sub-Fund is permitted to use leverage (including derivatives, as described further below) to gain the above exposures, the value of these positions may be greater than the Sub-Fund's net asset value, so are measured as a proportion of the Sub-Fund's overall investment exposure. For the avoidance of doubt, the investment restrictions outlined in the paragraphs below are measured by reference to the Sub-Fund's net asset value, and not the Sub-Fund's overall investment exposure, but remain subject at all times to the investment restrictions outlined in the paragraphs above.

In seeking to achieve its investment objective and/or for liquidity purposes, the Sub-Fund may invest up to 40% of its net asset value in other assets such as money market instruments (i.e. debt securities with short term maturities), deposits, cash and cash equivalents (including deposits, treasury bills, certificates of deposit, bankers acceptances and commercial paper). The instruments detailed in this paragraph may also be used to collateralise the Sub-Fund's derivative positions.

The Sub-Fund may also gain exposure to commodities up to 10% of its net asset value, indirectly through investment in exchange-traded funds and closed-ended funds constituting transferable securities.

The collective investment schemes in which the Sub-Fund invests may be managed by the sub-investment manager or an associate of the sub-investment manager. By investing in these vehicles, the Sub-Fund may also have some limited exposure to alternative asset classes, such as (but not limited to) property, private equity and commodities.

The Sub-Fund may use derivatives (that is financial instruments whose value derives from and is dependent on another underlying asset) for Efficient Portfolio Management purposes, including hedging. The Sub-Fund may also use derivatives, such as futures and options, for broader investment purposes to help meet its investment objective (including to gain exposure to the asset classes described above), which may increase the volatility and risk profile of the Sub-Fund.

Except as outlined above, there are no geographic, industry or sectoral restrictions on the investments of the Sub-Fund.

Performance

	Period of R&A (%)	1 yr (%)	3 yrs (%)	5 yrs (%)	Since Launch (%)

Past performance does not predict future returns.

Sub-Investment Manager's report (continued)

It was a particularly strong period for the Sub-Fund's performance as the unwinding of many of President Donald Trump's tariff threats and the ongoing boom in AI investment drove double digit returns. The Sub-Fund's positions in China A and broader Emerging Market equities enjoyed a spectacular run, closely followed by US and Japanese equities. Other asset classes delivered positively too, most notably Emerging Market Debt and Gold.

Over this period, the overweight positions in equity and gold added value to the portfolio. The Allianz Global Sustainability and UK Listed Opportunities funds struggled, whilst the Allianz China A Shares fund sharply outperformed the benchmark. Regarding alpha trades, the Spanish equity position and the US and German steepener positions added value, but the UK mid-cap and Hong Kong Technology trades detracted.

Sub-Investment Activities

This is for guidance only and not indicative of future allocation.

Over the period, we increased the Sub-Fund's tactical equity overweight, with additions to the US, Japan and Emerging Markets. With the impact of remaining tariffs likely to raise prices and continuing stubborn inflation prints, UK Gilt and Global Government bond positions returned to neutral. In terms of fund selection, the Allianz Global Unconstrained equity fund was exited.

With regards to new alpha trades, positions in Spanish equities (strong local growth, less exposed to geopolitical ructions) and Hong Kong Technology equities (AI beneficiaries at reasonable valuation) were introduced. Additionally, we re-introduced a 5s30s US treasury steepener, which aims to benefit from future rate cuts with question marks over the longer-term inflation outlook. Finally, a small position in Industrial metals was exited.

Market View and Outlook

Macroeconomic fundamental data remains solid, corporate earnings appear healthy, and central banks are broadly on an easing monetary path, all of which are supportive for equities. On the cautionary side, inflation has yet to return to long-term targets and labour markets have begun to show signs of softening. Our proprietary quantitative investment signals remain strong across equity regions. At the end of October, combining the fundamental and quantitative views, the Sub-Fund has an overweight to equities, with a preference for Japan, Emerging Markets and Europe.

Conversely, the Sub-Fund has an underweight allocation to fixed income. This is driven by the underweight allocation to credit (both investment grade and high yield) – preferring to take risks in equities and Emerging Market debt. The allocation to sovereign bonds was broadly neutral.

The gold overweight remains a key position within the overall portfolio, providing defensive characteristics and supported by central bank purchases.

Risk and reward profile

The risk and reward indicator table demonstrates where the Sub-Fund ranks in terms of its potential risk and reward. The higher the rank the greater the potential reward but the greater the risk of losing money. It is based on past data, may change over time and may not be a reliable indication of the future risk profile of the Sub-Fund. The shaded area in the table below shows the Sub-Fund's ranking on the risk and reward indicator.

The Sub-Fund is in a medium category because the price of its investments have risen or fallen to some extent. The category shown is not guaranteed to remain unchanged and may shift over time. Even the lowest category does not mean a risk-free investment.

The price of the Sub-Fund and any income from it can go down as well as up and is not guaranteed. Investors may not get back the amount invested. Past performance is not a guide to future performance.

Investment objectives express an intended result but there is no guarantee that such a result will be achieved. Depending on market conditions and the macro-economic environment, certain investment types and styles may perform better than others and investment objectives may become more difficult to achieve.

There may be cases where the organisation from which we buy a derivative, or an asset, fails to meet its obligations. The Sub-Fund's cash deposits are also subject to counterparty risk.

The Sub-Fund is entitled to use derivatives. Derivatives may not achieve their intended purpose. Their prices may move up or down significantly over relatively short periods of time which may result in losses greater than the amount paid.

The Sub-Fund faces non-market risk, relating to purchasing, holding and servicing the Sub-Fund's assets.

Where the Sub-Fund invests in bonds, there is a risk the bond issuer may fail to meet its repayments. Changes in interest rates, inflation and the creditworthiness of the bond issuer may also affect the bond's market value. This risk is particularly relevant where the Sub-Fund invests in bonds with a lower credit rating.

The Sub-Fund may invest in securities not denominated in sterling; the value of your investments may be affected by changes in currency exchange rates.

The Sub-Fund could make sufficiently liquid assets difficult to sell quickly at a fair price. This could result in an unpredictable fall in the value, and overall liquidity of the Sub-Fund.

The above risks may cause losses in the Sub-Fund.

For further information, please refer to the KIID.

For full details on risk factors for this Sub-Fund, please refer to the Prospectus.

There have been no changes to the risk and reward indicator in the period.

Task Force on Climate-Related Financial Disclosures (unaudited)

A statement on the climate related financial disclosures was published prior to 30 June 2025 at <https://www.truepotential.co.uk/fund-administration/#fund-documents>.

Comparative table

The following disclosures give a shareholder an indication of the performance of a share in the Sub-Fund. It also discloses the operating charges and direct transaction costs applied to each share. Operating charges are those charges incurred in operating the Sub-Fund and direct transaction costs are costs incurred when purchasing or selling securities in the portfolio of investments.

+Rounded to 2 decimal places.

++The operating charges are represented by the Ongoing Charges Figure (OCF). The OCF consists principally of the ACD's periodic charge and the Investment Manager's fee which are included in the annual management charge, but also includes the costs for other services paid. It is indicative of the charges which the share class may incur in a year as it is calculated on historical data. Included within the OCF are synthetic costs which included the OCF of the underlying funds weighted on the basis of their investment proportion.

**Management fee rate has been changed from 0.53% to 0.76% from 05 June 2025.

Investments carry risk. Past performance is not a guide to future performance. Investors may not get back the amount invested.

True Potential Allianz Growth

Sub-Investment Manager's report

This supplemental reporting is intended to provide you with an overview of portfolio activity during the period and should not be relied upon to make investment decisions or otherwise.

Investment Objective and Policy

The investment objective of the Sub-Fund is to achieve capital growth (generated through an increase in the value of the assets held by the Sub-Fund), over rolling 5-year periods (net of fees).

Please be aware the Sub-Fund's capital is at risk and there is no guarantee that the Sub-Fund will achieve its investment objective over any particular period or at all.

The Sub-Fund seeks to achieve its objective through the active management of a multi-asset strategy, by investing at least 80% of its overall exposure in a global portfolio of equity securities (i.e. shares), equity-related securities (i.e. other investments whose value is related to equities such as derivatives), fixed income securities (i.e. bonds issued by corporates and governments) and fixed income related securities (i.e. other investments whose value is related to debt). Investments may be made anywhere in the world including developed markets, non-developed markets or emerging market countries.

The Sub-Fund will invest at least 50% of its assets in units or shares of other collective investment schemes such as UCITS Schemes and/or eligible non-UCITS schemes (including collective investment schemes that are exchange-traded funds) and closed-ended funds constituting transferable securities.

The Sub-Fund will be managed such that 60% to 90% of its overall exposure will relate to equity and equity-related securities, with 5% to 35% in fixed income and fixed income-related securities, including up to 10% in high-yielding bonds (being unrated bonds or those rated below investment grade (i.e. below BBB minus or equivalent) by a single external rating agency under normal market conditions).

As the Sub-Fund is permitted to use leverage (including derivatives, as described further below) to gain the above exposures, the value of these positions may be greater than the Sub-Fund's net asset value, so are measured as a proportion of the Sub-Fund's overall investment exposure. For the avoidance of doubt, the investment restrictions outlined in the paragraphs below are measured by reference to the Sub-Fund's net asset value, and not the Sub-Fund's overall investment exposure, but remain subject at all times to the investment restrictions outlined in the paragraphs above.

In seeking to achieve its investment objective and/or for liquidity purposes, the Sub-Fund may invest up to 50% of its net asset value in other assets such as money market instruments (i.e. debt securities with short term maturities), deposits, cash and cash equivalents (including deposits, treasury bills, certificates of deposit, bankers acceptances and commercial paper). The instruments detailed in this paragraph may also be used to collateralise the Sub-Fund's derivative positions.

The Sub-Fund may also gain exposure to commodities up to 10% of its net asset value, indirectly through investment in exchange-traded funds and closed-ended funds constituting transferable securities.

The collective investment schemes in which the Sub-Fund invests may be managed by the sub-investment manager or an associate of the sub-investment manager. By investing in these vehicles, the Sub-Fund may also have some limited exposure to alternative asset classes, such as (but not limited to) property, private equity and commodities.

The Sub-Fund may use derivatives (that is financial instruments whose value derives from and is dependent on another underlying asset) for Efficient Portfolio Management purposes, including hedging. The Sub-Fund may also use derivatives, such as futures and options, for broader investment purposes to help meet its investment objective (including to gain exposure to the asset classes described above), which may increase the volatility and risk profile of the Sub-Fund.

Except as outlined above, there are no geographic, industry or sectoral restrictions on the investments of the Sub-Fund.

Sub-Investment Manager's report (continued)**Performance**

	Period of R&A (%)	1 yr (%)	3 yrs (%)	5 yrs (%)	Since Launch (%)

Source: Morningstar, 31 October 2025, net of fees (annualised). Sub-Fund Inception: 19 May 2016.

Past performance does not predict future returns.

It was a particularly strong period for the Sub-Fund's performance as the unwinding of many of President Donald Trump's tariff threats and the ongoing boom in Artificial Intelligence investment drove double digit returns. The Sub-Fund's positions in China A shares and broader Emerging Market equities enjoyed a spectacular run, closely followed by US and Japanese equities. Other asset classes delivered positively too, most notably Emerging Market Debt and Gold.

Over this period, the overweight positions in equity and gold added value to the portfolio. The Allianz Global Sustainability and UK Listed Opportunities funds struggled, whilst the Allianz China A Shares fund sharply outperformed the benchmark. Regarding alpha trades, the Spanish equity position and the US and German steepener positions added value, but the UK mid-cap and Hong Kong Technology trades detracted.

Sub-Investment Activities

This is for guidance only and not indicative of future allocation.

Over the period we increased the Sub-Fund's tactical equity overweight, with additions to the US, Japan and Emerging Markets. With the impact of remaining tariffs likely to raise prices and continuing stubborn inflation prints, UK Gilt and Global Government bond positions returned to neutral. In terms of fund selection, the Allianz Global Unconstrained equity fund was exited.

With regards to new alpha trades, positions in Spanish equities (strong local growth, less exposed to geopolitical ructions) and Hong Kong Technology equities (AI beneficiaries at reasonable valuation) were introduced. Additionally, we re-introduced a 5s30s US treasury steepener, which aims to benefit from future rate cuts with question marks over the longer-term inflation outlook. Finally, a small position in Industrial metals was exited.

Market View and Outlook

Macroeconomic fundamental data remains solid, corporate earnings appear healthy, and central banks are broadly on an easing monetary path, all of which are supportive for equities. On the cautionary side, inflation has yet to return to long-term targets and labour markets have begun to show signs of softening. Our proprietary quantitative investment signals remain strong across equity regions. At the end of October, combining the fundamental and quantitative views, the Sub-Fund has an overweight to equities, with a preference for Japan, Emerging Markets and Europe.

Conversely, the Sub-Fund has an underweight allocation to fixed income. This is driven by the underweight allocation to credit (both investment grade and high yield) – preferring to take risks in equities and Emerging Market debt. The allocation to sovereign bonds was broadly neutral.

The gold overweight remains a key position within the overall portfolio, providing defensive characteristics and supported by central bank purchases.

Risk and reward profile

The risk and reward indicator table demonstrates where the Sub-Fund ranks in terms of its potential risk and reward. The higher the rank the greater the potential reward but the greater the risk of losing money. It is based on past data, may change over time and may not be a reliable indication of the future risk profile of the Sub-Fund. The shaded area in the table below shows the Sub-Fund's ranking on the risk and reward indicator.

The Sub-Fund is in a medium category because the price of its investments have risen or fallen to some extent. The category shown is not guaranteed to remain unchanged and may shift over time. Even the lowest category does not mean a risk-free investment.

The price of the Sub-Fund and any income from it can go down as well as up and is not guaranteed. Investors may not get back the amount invested. Past performance is not a guide to future performance.

Investment objectives express an intended result but there is no guarantee that such a result will be achieved. Depending on market conditions and the macro-economic environment, certain investment types and styles may perform better than others and investment objectives may become more difficult to achieve.

There may be cases where the organisation from which we buy a derivative, or an asset, fails to meet its obligations. The Sub-Fund's cash deposits are also subject to counterparty risk.

The Sub-Fund is entitled to use derivatives. Derivatives may not achieve their intended purpose. Their prices may move up or down significantly over relatively short periods of time which may result in losses greater than the amount paid.

The Sub-Fund faces non-market risk, relating to purchasing, holding and servicing the Sub-Fund's assets.

Where the Sub-Fund invests in bonds, there is a risk the bond issuer may fail to meet its repayments. Changes in interest rates, inflation and the creditworthiness of the bond issuer may also affect the bond's market value. This risk is particularly relevant where the Sub-Fund invests in bonds with a lower credit rating.

The Sub-Fund may invest in securities not denominated in sterling; the value of your investments may be affected by changes in currency exchange rates.

Certain Market conditions could make sufficiently liquid assets difficult to sell quickly at a fair price. This could result in an unpredictable fall in the value, and overall liquidity of the Sub-Fund.

The above risks may cause losses in the Sub-Fund.

For further information please refer to the KIID.

For full details on risk factors for this Sub-Fund, please refer to the Prospectus.

During the period, the risk and reward indicator changed from 5 to 4.

Task Force on Climate-Related Financial Disclosures (unaudited)

A statement on the climate related financial disclosures was published prior to 30 June 2025 at <https://www.truepotential.co.uk/fund-administration/#fund-documents>.

Comparative table

The following disclosures give a shareholder an indication of the performance of a share in the Sub-Fund. It also discloses the operating charges and direct transaction costs applied to each share. Operating charges are those charges incurred in operating the Sub-Fund and direct transaction costs are costs incurred when purchasing or selling securities in the portfolio of investments.

+Rounded to 2 decimal places.

+++The operating charges are represented by the Ongoing Charges Figure (OCF). The OCF consists principally of the ACD's periodic charge and the Investment Manager's fee which are included in the annual management charge, but also includes the costs for other services paid. It is indicative of the charges which the share class may incur in a year as it is calculated on historical data. Included within the OCF are synthetic costs which included the OCF of the underlying funds weighted on the basis of their investment proportion.

**Management fee rate has been changed from 0.53% to 0.76 from 05 June 2025.

Investments carry risk. Past performance is not a guide to future performance. Investors may not get back the amount invested.

True Potential Growth-Aligned Defensive

Sub-Investment Manager's report

This supplemental reporting is intended to provide you with an overview of portfolio activity during the period and should not be relied upon to make investment decisions or otherwise.

Investment Objective and Policy

The investment objective of the Sub-Fund is to achieve capital growth over the medium to long term (3 years or longer). Please be aware that there is no guarantee that capital will be preserved.

The Investment Manager will seek to diversify the Sub-Fund's exposures across asset classes to reflect the defensive nature of the Sub-Fund. The Sub-Fund will be invested in a range of higher and lower risk assets. Exposure to higher risk assets is expected to lie in a range between 10.0% and 40.0% of assets.

Lower risk assets include domestic and international government and corporate bonds, money market instruments and cash or near cash instruments. Exposure to lower risk assets may be achieved directly, through investment in bonds and money market instruments, or indirectly, through collective investment schemes.

Higher risk assets include domestic and international equities, property, commodities and absolute return strategies. Exposure to these higher risk assets will be achieved indirectly through collective investment schemes, listed securities or directly through equities as applicable.

The Sub-Fund may also invest in liquid investments, such as money market instruments, deposits, cash or near cash instruments and government issued debt securities, to keep the total market exposure consistent with the risk profile of the Sub-Fund.

The Sub-Fund may also use spot and forward foreign exchange instruments to manage currency exposure.

There are no geographical restrictions on the countries of investment.

Derivatives may be used for Efficient Portfolio Management only.

Performance

	Period of R&A (%)	1 yr (%)	3 yrs (%)	5 yrs (%)	Since Launch (%)
True Potential Growth-Aligned Defensive (Acc)	9.22	10.94	6.92	3.71	2.91
Morningstar UK Cautious Target Allocation Index	4.28	6.38	5.22	0.47	1.76

Source: Morningstar, 31 October 2025, net of fees (annualised). Sub-Fund Inception: 10 May 2018.

The Sub-Fund delivered a 9.22% return, outperforming the Morningstar Index by 4.94%. The Sub-Fund's benefitted from a pro-risk positioning during the tariff turbulence and heightened geopolitical tensions.

An overweight allocation to global equities and global high yield bonds were the main positive contributors. Within equities, overweights to Europe, the UK, Emerging Markets and Japan — all of which delivered double-digit gains. US equities, held at a neutral allocation, also performed strongly, supported by robust earnings growth, AI-related momentum, and signs of monetary policy easing.

An overweight to global sovereign bonds further enhanced returns, as easing inflation pressures — which remained contained despite the tariff impact — enabled central banks to lower interest rates, supporting mid-single-digit gains.

Sub-Investment Manager's report (continued)**Sub-Investment Activities**

Portfolio changes enhanced the Sub-Fund's regional diversification, with greater emphasis on markets outside the US. Emerging Markets were a key addition.

Within US equities, exposure to the S&P 500 Equal-Weight Index was rotated into the Market-Cap Index, providing greater exposure to companies with stronger earnings momentum.

Fixed income positioning was adjusted as inflation, interest rate, and supply–demand dynamics evolved. The Sub-Fund added US Treasuries, supported by a more benign inflation outlook and policy actions aimed at containing yields. Later in the period, we re-entered long-dated UK index-linked gilts following earlier sales, reflecting expectations of tapering quantitative tightening and renewed fiscal consolidation efforts.

In Alternatives, a temporary increase made to gold to enhance portfolio diversification and benefit from safe-haven demand amid concerns over central bank independence and geopolitical tensions.

Finally, the Sub-Fund increased sterling hedging on US equity exposures.

Market View and Outlook

US nominal GDP remains healthy, underpinned by substantial AI investment, healthy corporate profits, a unique productivity impulse and fiscal deficits. Furthermore, a notable improvement in financial conditions combined with the prospect of lower interest rates and President Trump's frontloaded fiscal spending supports our expectation that the economic cycle will extend beyond this period.

Ex-US real GDP remains weak, although projections are again becoming modestly more optimistic, particularly in Europe. While recent US tariff actions are expected to weigh on ex-US growth, there is comparatively more room – and political will – for further fiscal stimulus outside of the US.

We favour an equity overweight via non-US equities, although alert to requirements for earnings delivery in all markets, but particularly those with more stretched valuations. Sovereign and corporate bond valuations offer limited value. A neutral view on Alternatives given the upside risks of inflation.

Risk and reward profile

The risk and reward indicator table demonstrates where the Sub-Fund ranks in terms of its potential risk and reward. The higher the rank the greater the potential reward but the greater the risk of losing money. It is based on past data, may change over time and may not be a reliable indication of the future risk profile of the Sub-Fund. The shaded area in the table below shows the Sub-Fund's ranking on the risk and reward indicator.

The Sub-Fund is in a medium category because the price of its investments have risen or fallen to some extent. The category shown is not guaranteed to remain unchanged and may shift over time. Even the lowest category does not mean a risk-free investment.

The price of the Sub-Fund and any income from it can go down as well as up and is not guaranteed. Investors may not get back the amount invested. Past performance is not a guide to future performance.

This Sub-Fund invests into other investment funds, they may invest in different assets, economic sectors, or countries (including emerging markets) and therefore have different risk profiles not in line with those of this Sub-Fund.

Investment objectives express an intended result but there is no guarantee that such a result will be achieved. Depending on market conditions and the macro-economic environment, certain investment types and styles may perform better than others and investment objectives may become more difficult to achieve.

Investments in emerging markets may involve greater risks due to political and economic instability, and underdeveloped markets and systems.

There may be cases where the organisation from which we buy a derivative, or an asset, fails to meet its obligations. The Sub-Fund's cash deposits are also subject to counterparty risk.

The Sub-Fund is entitled to use derivatives. Derivatives may not achieve their intended purpose. Their prices may move up or down significantly over relatively short periods of time which may result in losses greater than the amount paid.

The Sub-Fund faces non-market risk, relating to purchasing, holding and servicing the Sub-Fund's assets.

Where the Sub-Fund invests in bonds, there is a risk the bond issuer may fail to meet its repayments. Changes in interest rates, inflation and the creditworthiness of the bond issuer may also affect the bond's market value. This risk is particularly relevant where the fund invests in bonds with a lower credit rating.

The Sub-Fund may invest in securities not denominated in GBP. The value of your investments may be affected by changes in currency exchange rates.

Certain Market conditions could make sufficiently liquid assets difficult to sell quickly at a fair price. This could result in an unpredictable fall in the value, and overall liquidity of the Sub-Fund.

The above risks may cause losses in the Sub-Fund.

For further information please refer to the KIID.

For full details on risk factors for this Sub-Fund, please refer to the Prospectus.

There have been no changes to the risk and reward indicator in the period.

Task Force on Climate-Related Financial Disclosures (unaudited)

A statement on the climate related financial disclosures was published prior to 30 June 2025 at <https://www.truepotential.co.uk/fund-administration/#fund-documents>.

Comparative table

The following disclosures give a shareholder an indication of the performance of a share in the Sub-Fund. It also discloses the operating charges and direct transaction costs applied to each share. Operating charges are those charges incurred in operating the Sub-Fund and direct transaction costs are costs incurred when purchasing or selling securities in the portfolio of investments.

 Prices				
Highest share price (p)	124.14	115.53	109.30	105.30
Lowest share price (p)	113.87	107.63	100.60	100.10

+Rounded to 2 decimal places.

++The operating charges are represented by the Ongoing Charges Figure (OCF). The OCF consists principally of the ACD's periodic charge and the Investment Manager's fee which are included in the annual management charge, but also includes the costs for other services paid. It is indicative of the charges which the share class may incur in a year as it is calculated on historical data. Included within the OCF are synthetic costs which included the OCF of the underlying funds weighted on the basis of their investment proportion.

Investments carry risk. Past performance is not a guide to future performance. Investors may not get back the amount invested.

True Potential Growth-Aligned Cautious

Sub-Investment Manager's report

This supplemental reporting is intended to provide you with an overview of portfolio activity during the period and should not be relied upon to make investment decisions or otherwise.

Investment Objective and Policy

The investment objective of the Sub-Fund is to achieve capital growth over the medium to long term (3 years or longer). Please be aware that there is no guarantee that capital will be preserved.

The Investment Manager will seek to diversify the Sub-Fund's exposures across asset classes to reflect the Cautious nature of the Sub-Fund. The Sub-Fund will be invested in a range of higher and lower risk assets. Exposure to higher risk assets is expected to lie in a range between 25% and 60% of assets.

Lower risk assets include domestic and international government and corporate bonds, money market instruments and cash or near cash instruments. Exposure to lower risk assets may be achieved directly, through investment in bonds and money market instruments, or indirectly, through eligible collective investment schemes.

Higher risk assets include domestic and international equities, property, commodities and absolute return strategies. Exposure to these higher risk assets will be achieved indirectly through collective investment schemes, listed securities or directly through equities where applicable.

The Sub-Fund may also invest in liquid investments, such as money market instruments, deposits, cash or near cash instruments and government issued debt securities, to keep the total market exposure consistent with the risk profile of the Sub-Fund.

The Sub-Fund may also use spot and forward foreign exchange instruments to manage currency exposure.

There are no geographical restrictions on the countries of investment.

Derivatives may be used for Efficient Portfolio Management only.

Performance

	Period of R&A (%)	1 yr (%)	3 yrs (%)	5 yrs (%)	Since Launch (%)
True Potential Growth-Aligned Cautious (Acc)	12.31	13.50	8.60	5.38	3.98
Morningstar UK Moderately Cautious Target Allocation Index	7.73	9.47	7.56	3.56	3.51

Source: Morningstar, 31 October 2025, net of fees (annualised). Sub-Fund Inception: 10 May 2018

The Cautious Fund delivered a 12.31% return, outperforming the Morningstar Index by 4.58%. The Sub-Fund's benefitted from a pro-risk positioning during the tariff turbulence and heightened geopolitical tensions.

An overweight allocation to global equities and global high yield bonds were the main positive contributors. Within equities, overweights to Europe, the UK, Emerging Markets and Japan — all of which delivered double-digit gains. US equities, held at a neutral allocation, also performed strongly, supported by robust earnings growth, AI-related momentum, and signs of monetary policy easing.

Global sovereign bonds further enhanced returns, as easing inflation pressures — which remained contained despite the tariff impact — enabled central banks to begin lowering interest rates, supporting mid-single-digit gains.

Sub-Investment Activities

Portfolio changes enhanced the Sub-Fund's regional diversification, with greater emphasis on markets outside the US. Emerging Markets were a key addition.

Within US equities, exposure to the S&P 500 Equal-Weight Index was rotated into the Market-Cap Index, providing greater exposure to companies with stronger earnings momentum.

Sub-Investment Manager's report (continued)

Fixed income positioning was adjusted as inflation, interest rate, and supply–demand dynamics evolved. The Sub-Fund added US Treasuries, supported by a more benign inflation outlook and policy actions aimed at containing yields. Later in the period, we re-entered long-dated UK Index-Linked Gilts following earlier sales, reflecting expectations of tapering quantitative tightening and renewed fiscal consolidation efforts.

In alternatives, a temporary increase made to gold to enhance portfolio diversification and benefit from safe-haven demand amid concerns over central bank independence and geopolitical tensions.

Finally, the Sub-Fund increased Sterling hedging on US equity exposures.

Market View and Outlook

US nominal GDP remains healthy, underpinned by substantial AI investment, healthy corporate profits, a unique productivity impulse and fiscal deficits. Furthermore, a notable improvement in financial conditions combined with the prospect of lower interest rates and President Donald Trump's frontloaded fiscal spending supports our expectation that the economic cycle will extend beyond this period.

Ex-US real GDP remains weak, although projections are again becoming modestly more optimistic, particularly in Europe. While recent US tariff actions are expected to weigh on ex-US growth, there is comparatively more room – and political will – for further fiscal stimulus outside of the US.

We favour an equity overweight via non-US equities, although alert to requirements for earnings delivery in all markets, but particularly those with more stretched valuations. Sovereign and corporate bond valuations offer limited value. A neutral view on Alternatives given the upside risks of inflation.

Risk and reward profile

The risk and reward indicator table demonstrates where the Sub-Fund ranks in terms of its potential risk and reward. The higher the rank the greater the potential reward but the greater the risk of losing money. It is based on past data, may change over time and may not be a reliable indication of the future risk profile of the Sub-Fund. The shaded area in the table below shows the Sub-Fund's ranking on the risk and reward indicator.

The Sub-Fund is in a medium category because the price of its investments have risen or fallen to some extent. The category shown is not guaranteed to remain unchanged and may shift over time. Even the lowest category does not mean a risk-free investment.

The price of the Sub-Fund and any income from it can go down as well as up and is not guaranteed. Investors may not get back the amount invested. Past performance is not a guide to future performance.

Where this Sub-Fund invests into other investment funds, they may invest in different assets, countries or economic sectors and therefore have different risk profiles not in line with those of this Sub-Fund.

Investment objectives express an intended result but there is no guarantee that such a result will be achieved. Depending on market conditions and the macro-economic environment, certain investment types and styles may perform better than others and investment objectives may become more difficult to achieve.

Investments in emerging markets may involve greater risks due to political and economic instability and underdeveloped markets and systems.

There may be cases where the organisation from which we buy a derivative, or an asset, fails to meet its obligations. The Sub-Fund's cash deposits are also subject to counterparty risk.

The Sub-Fund is entitled to use derivatives. Derivatives may not achieve their intended purpose. Their prices may move up or down significantly over relatively short periods of time which may result in losses greater than the amount paid.

The Sub-Fund faces non-market risk, relating to purchasing, holding and servicing the Sub-Fund's assets.

Where the Sub-Fund invests in bonds, there is a risk the bond issuer may fail to meet its repayments. Changes in interest rates, inflation and the creditworthiness of the bond issuer may also affect the bond's market value. This risk is particularly relevant where the Sub-Fund invests in bonds with a lower credit rating.

The Sub-Fund may invest in securities not denominated in sterling; the value of your investments may be affected by changes in currency exchange rates.

Certain Market conditions could make sufficiently liquid assets difficult to sell quickly at a fair price. This could result in an unpredictable fall in the value, and overall liquidity of the Sub-Fund.

The above risks may cause losses in the Sub-Fund.

For further information please refer to the KIID.

For full details on risk factors for this Sub-Fund, please refer to the Prospectus.

There have been no changes to the risk and reward indicator in the period.

Task Force on Climate-Related Financial Disclosures (unaudited)

A statement on the climate related financial disclosures was published prior to 30 June 2025 at <https://www.truepotential.co.uk/fund-administration/#fund-documents>.

Comparative table

The following disclosures give a shareholder an indication of the performance of a share in the Sub-Fund. It also discloses the operating charges and direct transaction costs applied to each share. Operating charges are those charges incurred in operating the Sub-Fund and direct transaction costs are costs incurred when purchasing or selling securities in the portfolio of investments.

	31.10.25	A Accumulation 30.04.25	30.04.24	30.04.23

Lowest share price (p)	119.96	113.26	104.10	102.50

+Rounded to 2 decimal places.

++The operating charges are represented by the Ongoing Charges Figure (OCF). The OCF consists principally of the ACD's periodic charge and the Investment Manager's fee which are included in the annual management charge, but also includes the costs for other services paid. It is indicative of the charges which the share class may incur in a year as it is calculated on historical data. Included within the OCF are synthetic costs which included the OCF of the underlying funds weighted on the basis of their investment proportion.

Investments carry risk. Past performance is not a guide to future performance. Investors may not get back the amount invested.

True Potential Growth-Aligned Balanced

Sub-Investment Manager's report

This supplemental reporting is intended to provide you with an overview of portfolio activity during the period and should not be relied upon to make investment decisions or otherwise.

Investment Objective and Policy

The investment objective of the Sub-Fund is to achieve capital growth over the long term (5 years or longer). Please be aware that there is no guarantee that capital will be preserved.

The Investment Manager will seek to diversify the Sub-Fund's exposures across asset classes to reflect the balanced nature of the Sub-Fund. The Sub-Fund will be invested in a range of higher and lower risk assets. Exposure to higher risk assets is expected to lie in a range between 40% and 80% of assets.

Lower risk assets include domestic and international government and corporate bonds, money market instruments and cash or near cash instruments. Exposure to lower risk assets may be achieved directly, through investment in bonds and money market instruments, or indirectly, through eligible collective investment schemes.

Higher risk assets include domestic and international equities, property, commodities and absolute return strategies. Exposure to these higher risk assets will be achieved indirectly through collective investment schemes, listed securities or directly through equities as applicable.

The Sub-Fund may also invest in liquid investments, such as money market instruments, deposits, cash or near cash instruments and government issued debt securities, to keep the total market exposure consistent with the risk profile of the Sub-Fund.

The Sub-Fund may also use spot and forward foreign exchange instruments to manage currency exposure.

There are no geographical restrictions on the countries of investment.

Derivatives may be used for Efficient Portfolio Management only.

Performance

	Period of R&A (%)	1 yr (%)	3 yrs (%)	5 yrs (%)	Since Launch (%)
True Potential Growth-Aligned Balanced (Acc)	15.49	15.93	10.42	7.26	5.25
Morningstar UK Moderate Target Allocation Index	11.29	12.57	9.92	6.67	5.38

Source: Morningstar, 31 October 2025, net of fees (annualised). Sub-Fund Inception: 10 May 2018.

The Balanced Sub-fund delivered a 15.49% return, outperforming the Morningstar Index by 4.20%. The Sub-fund benefitted from a pro-risk positioning during the tariff turbulence and heightened geopolitical tensions.

An overweight allocation to global equities and global high yield bonds were the main positive contributors. Within equities, overweights to Europe, the UK, Emerging Markets and Japan—all of which delivered double-digit gains. US equities, held at a neutral allocation, also performed strongly, supported by robust earnings growth, AI-related momentum, and signs of monetary policy easing.

Global sovereign bonds further enhanced returns, as easing inflation pressures—which remained contained despite the tariff impact—enabled central banks to lower interest rates, supporting mid-single-digit gains.

Sub-Investment Activities

Portfolio changes enhanced the Sub-fund's regional diversification, with greater emphasis on markets outside the US. Emerging Markets were a key addition.

Within US equities, exposure to the S&P 500 Equal-Weight Index was rotated into the Market-Cap Index, providing greater exposure to companies with stronger earnings momentum.

Sub-Investment Manager's report (continued)

Fixed income positioning was adjusted as inflation, interest rate, and supply–demand dynamics evolved. The Sub-fund added US Treasuries, supported by a more benign inflation outlook and policy actions aimed at containing yields. Later in the period, we re-entered long-dated UK index-linked gilts following earlier sales, reflecting expectations of tapering quantitative tightening and renewed fiscal consolidation efforts.

In Alternatives, a temporary increase made to gold to enhance portfolio diversification and benefit from safe-haven demand amid concerns over central bank independence and geopolitical tensions.

Finally, the Sub-fund increased Sterling hedging on US equity exposures.

Market View and Outlook

US nominal GDP remains healthy, underpinned by substantial AI investment, healthy corporate profits, a unique productivity impulse and fiscal deficits. Furthermore, a notable improvement in financial conditions combined with the prospect of lower interest rates and President Trump's frontloaded fiscal spending supports our expectation that the economic cycle will extend beyond this period.

Ex-US real GDP remains weak, although projections are again becoming modestly more optimistic, particularly in Europe. While recent US tariff actions are expected to weigh on ex-US growth, there is comparatively more room – and political will – for further fiscal stimulus outside of the US.

We favour an equity overweight via non-US equities, although alert to requirements for earnings delivery in all markets, but particularly those with more stretched valuations. Sovereign and corporate bond valuations offer limited value. A neutral view on Alternatives given the upside risks of inflation.

Risk and reward profile

The risk and reward indicator table demonstrates where the Sub-Fund ranks in terms of its potential risk and reward. The higher the rank the greater the potential reward but the greater the risk of losing money. It is based on past data, may change over time and may not be a reliable indication of the future risk profile of the Sub-Fund. The shaded area in the table below shows the Sub-Fund's ranking on the risk and reward indicator.

The Sub-Fund is in a medium category because the price of its investments have risen or fallen to some extent. The category shown is not guaranteed to remain unchanged and may shift over time. Even the lowest category does not mean a risk-free investment.

The price of the Sub-Fund and any income from it can go down as well as up and is not guaranteed. Investors may not get back the amount invested. Past performance is not a guide to future performance.

Where this Sub-Fund invests into other investment funds, they may invest in different assets, countries or economic sectors and therefore have different risk profiles not in line with those of this Sub-Fund.

Investment objectives express an intended result but there is no guarantee that such a result will be achieved. Depending on market conditions and the macro-economic environment, certain investment types and styles may perform better than others and investment objectives may become more difficult to achieve.

Investments in emerging markets may involve greater risks due to political and economic instability, and underdeveloped markets and systems.

There may be cases where the organisation from which we buy a derivative, or an asset, fails to meet its obligations. The Sub-Fund's cash deposits are also subject to counterparty risk.

The Sub-Fund is entitled to use derivatives. Derivatives may not achieve their intended purpose. Their prices may move up or down significantly over relatively short periods of time which may result in losses greater than the amount paid.

The Sub-Fund faces non-market risk, relating to purchasing, holding and servicing the Sub-Fund's assets.

Where the Sub-Fund invests in bonds, there is a risk the bond issuer may fail to meet its repayments. Changes in interest rates, inflation and the creditworthiness of the bond issuer may also affect the bond's market value. This risk is particularly relevant where the Sub-Fund invests in bonds with a lower credit rating.

The Sub-Fund may invest in securities not denominated in Sterling; the value of your investments may be affected by changes in currency exchange rates.

Certain Market conditions could make sufficiently liquid assets difficult to sell quickly at a fair price. This could result in an unpredictable fall in the value, and overall liquidity of the Sub-Fund.

The above risks may cause losses in the Sub-Fund.

For further information please refer to the KIID.

For full details on risk factors for this Sub-Fund, please refer to the Prospectus.

There have been no changes to the risk and reward indicator in the period.

Task Force on Climate-Related Financial Disclosures (unaudited)

A statement on the climate related financial disclosures was published prior to 30 June 2025 at <https://www.truepotential.co.uk/fund-administration/#fund-documents>.

Comparative table

The following disclosures give a shareholder an indication of the performance of a share in the Sub-Fund. It also discloses the operating charges and direct transaction costs applied to each share. Operating charges are those charges incurred in operating the Sub-Fund and direct transaction costs are costs incurred when purchasing or selling securities in the portfolio of investments.

True Potential Growth-Aligned Growth

Sub-Investment Manager's report

This supplemental reporting is intended to provide you with an overview of portfolio activity during the period and should not be relied upon to make investment decisions or otherwise.

Investment Objective and Policy

The investment objective of the Sub-Fund is to achieve capital growth over the long term (5 years or longer). Please be aware that there is no guarantee that capital will be preserved.

The Investment Manager will seek to diversify the Sub-Fund's exposures across asset classes and vary exposures to reflect the growth nature of the Sub-Fund. The Sub-Fund will be invested in a range of higher and lower risk assets. Exposure to higher risk assets is expected to lie in a range between 50% and 90% of assets.

Lower risk assets include domestic and international government and corporate bonds, money market instruments and cash or near cash instruments. Exposure to lower risk assets may be achieved directly, through investment in bonds and money market instruments, or indirectly, through eligible collective investment schemes.

Higher risk assets include domestic and international equities, property, commodities and absolute return strategies. Exposure to these higher risk assets will be achieved indirectly through collective investment schemes, listed securities or directly through equities as applicable.

The Sub-Fund may also invest in liquid investments, such as money market instruments, deposits, cash or near cash instruments and government issued debt securities, to keep the total market exposure consistent with the risk profile of the Sub-Fund.

The Sub-Fund may also use spot and forward foreign exchange instruments to manage currency exposure.

There are no geographical restrictions on the countries of investment.

Derivatives may be used for Efficient Portfolio Management only.

Performance

	Period of R&A (%)	1 yr (%)	3 yrs (%)	5 yrs (%)	Since Launch (%)
True Potential Growth-Aligned Growth (Acc)	18.96	18.68	12.51	9.60	6.81
Morningstar UK Moderately Adventurous Target Allocation Index	15.03	15.81	12.23	9.81	7.05

Source: Morningstar, 31 October 2025, net of fees (annualised). Sub-Fund Inception: 10 May 2018.

The Growth Fund delivered a 18.96% return, outperforming the Morningstar Index by 3.93%. The Sub-Fund's benefitted from a pro-risk positioning during the tariff turbulence and heightened geopolitical tensions.

An overweight allocation to global equities and global high yield bonds were the main positive contributors. Within equities, overweights to Europe, the UK, Emerging Markets and Japan – all of which delivered double-digit gains. US equities, held at a neutral allocation, also performed strongly, supported by robust earnings growth, AI-related momentum, and signs of monetary policy easing.

Global sovereign bonds further enhanced returns, as easing inflation pressures – which remained contained despite the tariff impact – enabled central banks to lower interest rates, supporting mid-single-digit gains.

Sub-Investment Activities

Portfolio changes enhanced the Fund's regional diversification, with greater emphasis on markets outside the US. Emerging Markets were a key addition.

Within US equities, exposure to the S&P 500 Equal-Weight Index was rotated into the Market-Cap Index, providing greater exposure to companies with stronger earnings momentum.

Sub-Investment Manager's report (continued)

Fixed income positioning was adjusted as inflation, interest rate, and supply–demand dynamics evolved. In the period, we re-entered long-dated UK index-linked gilts following earlier sales, reflecting expectations of tapering quantitative tightening and renewed fiscal consolidation efforts.

In Alternatives, a temporary increase made to gold to enhance portfolio diversification and benefit from safe-haven demand amid concerns over central bank independence and geopolitical tensions.

Finally, the Sub-Fund increased Sterling hedging on US equity exposures.

Market View and Outlook

US nominal GDP remains healthy, underpinned by substantial AI investment, healthy corporate profits, a unique productivity impulse and fiscal deficits. Furthermore, a notable improvement in financial conditions combined with the prospect of lower interest rates and President Trump's frontloaded fiscal spending supports our expectation that the economic cycle will extend beyond this period.

Ex-US real GDP remains weak, although projections are again becoming modestly more optimistic, particularly in Europe. While recent US tariff actions are expected to weigh on ex-US growth, there is comparatively more room – and political will – for further fiscal stimulus outside of the US.

We favour an equity overweight via non-US equities, although alert to requirements for earnings delivery in all markets, but particularly those with more stretched valuations. Sovereign and corporate bond valuations offer limited value. A neutral view on Alternatives given the upside risks of inflation.

Risk and reward profile

The risk and reward indicator table demonstrates where the Sub-Fund ranks in terms of its potential risk and reward. The higher the rank the greater the potential reward but the greater the risk of losing money. It is based on past data, may change over time and may not be a reliable indication of the future risk profile of the Sub-Fund. The shaded area in the table below shows the Sub-Fund's ranking on the risk and reward indicator.

The Sub-Fund is in a medium category because the price of its investments have risen or fallen to some extent. The category shown is not guaranteed to remain unchanged and may shift over time. Even the lowest category does not mean a risk-free investment.

The price of the Sub-Fund and any income from it can go down as well as up and is not guaranteed. Investors may not get back the amount invested. Past performance is not a guide to future performance.

Where the Sub-Fund invests into other investment funds, they may invest in different assets, economic sectors, or countries (including emerging markets) and therefore have different risk profiles not in line with those of the Sub-Fund.

Investment objectives express an intended result but there is no guarantee that such a result will be achieved. Depending on market conditions and the macro-economic environment, certain investment types and styles may perform better than others and investment objectives may become more difficult to achieve.

Investments in emerging markets may involve greater risks due to political and economic instability and underdeveloped markets and systems.

There may be cases where the organisation from which we buy a derivative, or an asset, fails to meet its obligations. The Sub-Fund's cash deposits are also subject to counterparty risk.

The Sub-Fund is entitled to use derivatives. Derivatives may not achieve their intended purpose. Their prices may move up or down significantly over relatively short periods of time which may result in losses greater than the amount paid.

The Sub-Fund faces non-market risk, relating to purchasing, holding and servicing the Sub-Fund's assets.

Where the Sub-Fund invests in bonds, there is a risk the bond issuer may fail to meet its repayments. Changes in interest rates, inflation and the creditworthiness of the bond issuer may also affect the bond's market value. This risk is particularly relevant where the Sub-Fund invests in bonds with a lower credit rating.

The Sub-Fund may invest in securities not denominated in Sterling; the value of your investments may be affected by changes in currency exchange rates.

Certain Market conditions could make sufficiently liquid assets difficult to sell quickly at a fair price. This could result in an unpredictable fall in the value, and overall liquidity of the Sub-Fund.

The above risks may cause losses in the Sub-Fund.

For further information, please refer to the KIID.

For full details on risk factors for the Sub-Fund, please refer to the Prospectus.

During the period, the risk and reward indicator changed from 5 to 4.

Task Force on Climate-Related Financial Disclosures (unaudited)

A statement on the climate related financial disclosures was published prior to 30 June 2025 at <https://www.truepotential.co.uk/fund-administration/#fund-documents>.

Comparative table

The following disclosures give a shareholder an indication of the performance of a share in the Sub-Fund. It also discloses the operating charges and direct transaction costs applied to each share. Operating charges are those charges incurred in operating the Sub-Fund and direct transaction costs are costs incurred when purchasing or selling securities in the portfolio of investments.

Lowest share price (p)	139.15	129.50	116.50	111.70

+Rounded to 2 decimal places.

++The operating charges are represented by the Ongoing Charges Figure (OCF). The OCF consists principally of the ACD's periodic charge and the Investment Manager's fee which are included in the annual management charge, but also includes the costs for other services paid. It is indicative of the charges which the share class may incur in a year as it is calculated on historical data. Included within the OCF are synthetic costs which included the OCF of the underlying funds weighted on the basis of their investment proportion.

Investments carry risk. Past performance is not a guide to future performance. Investors may not get back the amount invested.

True Potential Growth-Aligned Aggressive

Sub-Investment Manager's report

This supplemental reporting is intended to provide you with an overview of portfolio activity during the period and should not be relied upon to make investment decisions or otherwise.

Investment Objective and Policy

The investment objective of the Sub-Fund is to achieve capital growth over the long term (5 years or longer). Please be aware that there is no guarantee that capital will be preserved.

The Investment Manager will seek to diversify the Sub-Fund's exposures across asset classes and vary exposures to reflect the aggressive nature of the Sub-Fund. The Sub-Fund will be invested in a range of higher and lower risk assets. Exposure to higher risk assets is expected to lie in range between 60% and 100% of assets.

Lower risk assets include domestic and international government and corporate bonds, money market instruments and cash or near cash instruments. Exposure to lower risk assets may be achieved directly, through investment in bonds and money market instruments, or indirectly, through eligible collective investment schemes.

Higher risk assets include domestic and international equities, property, commodities and absolute return strategies. Exposure to these higher risk assets will be achieved indirectly through collective investment schemes, listed securities or directly through equities as applicable.

The Sub-Fund may also invest in liquid investments, such as money market instruments, deposits, cash or near cash instruments and government issued debt securities, to keep the total market exposure consistent with the risk profile of the Sub-Fund.

The Sub-Fund may also use spot and forward foreign exchange instruments to manage currency exposure.

There are no geographical restrictions on the countries of investment.

Derivatives may be used for Efficient Portfolio Management only.

Performance

	Period of R&A (%)	1 yr (%)	3 yrs (%)	5 yrs (%)	Since Launch (%)
True Potential Growth-Aligned Aggressive (Acc)	22.33	20.41	14.19	11.35	7.98
Morningstar UK Adventurous Target Allocation Index	19.26	18.80	14.65	12.81	9.07

Source: Morningstar, 31 October 2025, net of fees (annualised). Sub-Fund Inception: 10 May 2018.

The Aggressive Fund delivered a 22.33% return, outperforming the Morningstar Index by 3.07%. The Sub-Fund's benefitted from a pro-risk positioning during the tariff turbulence and heightened geopolitical tensions.

An overweight allocation to global equities and global high yield bonds were the main positive contributors. Within equities, overweights to Europe, the UK, Emerging Markets and Japan—all of which delivered double-digit gains. US equities, held at a neutral allocation, also performed strongly, supported by robust earnings growth, AI-related momentum, and signs of monetary policy easing.

Allocations to Gold and Man GLG Dynamic Income also contributed positively to returns, the former benefiting from a variety of factors such as a hedge against inflation, geopolitical risk, and central bank demand.

Sub-Investment Manager's report (continued)**Sub-Investment Activities**

Portfolio changes enhanced the Sub-Fund's regional diversification, with greater emphasis on markets outside the US. Emerging Markets were a key addition.

Within US equities, exposure to the S&P 500 Equal-Weight Index was rotated into the Market-Cap Index, providing greater exposure to companies with stronger earnings momentum. Furthermore, within global equity factors, iShares MSCI World Minimum Volatility was exited as geopolitical risks and trade tensions eased.

In Alternatives, a temporary increase made to gold to enhance portfolio diversification and benefit from safe-haven demand amid concerns over central bank independence and geopolitical tensions.

Finally, the Sub-Fund increased sterling hedging on US equity exposures.

Market View and Outlook

US nominal GDP remains healthy, underpinned by substantial AI investment, healthy corporate profits, a unique productivity impulse and fiscal deficits. Furthermore, a notable improvement in financial conditions combined with the prospect of lower interest rates and President Donald Trump's frontloaded fiscal spending supports our expectation that the economic cycle will extend beyond this period.

Ex-US real GDP remains weak, although projections are again becoming modestly more optimistic, particularly in Europe. While recent US tariff actions are expected to weigh on ex-US growth, there is comparatively more room – and political will – for further fiscal stimulus outside of the US.

We favour an equity overweight via non-US equities, although alert to requirements for earnings delivery in all markets, but particularly those with more stretched valuations. Sovereign and corporate bond valuations offer limited value. A neutral view on Alternatives given the upside risks of inflation.

Risk and reward profile

The risk and reward indicator table demonstrates where the Sub-Fund ranks in terms of its potential risk and reward. The higher the rank the greater the potential reward but the greater the risk of losing money. It is based on past data, may change over time and may not be a reliable indication of the future risk profile of the Sub-Fund. The shaded area in the table below shows the Sub-Fund's ranking on the risk and reward indicator.

The Sub-Fund is in a medium category because the price of its investments has risen or fallen to some extent. The category shown is not guaranteed to remain unchanged and may shift over time. Even the lowest category does not mean a risk-free investment.

The price of the Sub-Fund and any income from it can go down as well as up and is not guaranteed. Investors may not get back the amount invested. Past performance is not a guide to future performance.

Where this Sub-Fund invests into other investment funds, they may invest in different assets, countries or economic sectors and therefore have different risk profiles not in line with those of this Sub-Fund.

Investment objectives express an intended result but there is no guarantee that such a result will be achieved. Depending on market conditions and the macro-economic environment, certain investment types and styles may perform better than others and investment objectives may become more difficult to achieve.

There may be cases where the organisation from which we buy a derivative, or an asset, fails to meet its obligations. The Sub-Fund's cash deposits are also subject to counterparty risk.

The Sub-Fund is entitled to use derivatives. Derivatives may not achieve their intended purpose. Their prices may move up or down significantly over relatively short periods of time which may result in losses greater than the amount paid.

The Sub-Fund faces non-market risk, relating to purchasing, holding, and servicing the Sub-Fund's assets.

Where the Sub-Fund invests in bonds, there is a risk the bond issuer may fail to meet its repayments. Changes in interest rates, inflation, and the creditworthiness of the bond issuer may also affect the bond's market value. This risk is particularly relevant where the Sub-Fund invests in bonds with a lower credit rating.

The Sub-Fund may invest in securities not denominated in sterling; the value of your investments may be affected by changes in currency exchange rates.

Certain Market conditions could make sufficiently liquid assets difficult to sell quickly at a fair price. This could result in an unpredictable fall in the value, and overall liquidity of the Sub-Fund.

The above risks may cause losses in the Sub-Fund.

For further information please refer to the KIID.

For full details on risk factors for this Sub-Fund, please refer to the Prospectus.

There have been no changes to the risk and reward indicator in the period.

Task Force on Climate-Related Financial Disclosures (unaudited)

A statement on the climate related financial disclosures was published prior to 30 June 2025 at <https://www.truepotential.co.uk/fund-administration/#fund-documents>.

Comparative table

The following disclosures give a shareholder an indication of the performance of a share in the Sub-Fund. It also discloses the operating charges and direct transaction costs applied to each share. Operating charges are those charges incurred in operating the Sub-Fund and direct transaction costs are costs incurred when purchasing or selling securities in the portfolio of investments.

	31.10.25	A Accumulation 30.04.25	30.04.24	30.04.23

Performance fee	0.00%	0.00%	1.24%	0.00%
Direct transaction costs	0.00%	0.01%	0.00%	0.00%
 Prices				
Highest share price (p)	177.96	158.95	142.28	129.40
Lowest share price (p)	147.24	135.85	122.10	115.10

+Rounded to 2 decimal places.

++Direct transaction costs are stated after deducting the proportion of the amounts collected from dilution levies that relate to direct transaction costs. A negative transaction cost figure might arise where there is a timing difference between inflows and the settlement of the resultant purchases.

+++The operating charges are represented by the Ongoing Charges Figure (OCF). The OCF consists principally of the ACD's periodic charge and the Investment Manager's fee which are included in the annual management charge, but also includes the costs for other services paid. It is indicative of the charges which the share class may incur in a year as it is calculated on historical data. Included within the OCF are synthetic costs which included the OCF of the underlying funds weighted on the basis of their investment proportion.

Investments carry risk. Past performance is not a guide to future performance. Investors may not get back the amount invested.

True Potential Global Managed

Sub-Investment Manager's report

This supplemental reporting is intended to provide you with an overview of portfolio activity during the period and should not be relied upon to make investment decisions or otherwise.

Investment Objective and Policy

The investment objective of the Sub-Fund is to achieve capital growth over the medium term (3 years or longer).

Please be aware that there is no guarantee that capital will be preserved. The Investment Manager will seek to diversify the Sub-Fund's exposures across asset classes to reflect the balanced nature of the Sub-Fund.

The Sub-Fund will be invested in a range of higher and lower risk assets by investing generally in collective investment schemes. Exposure to higher risk assets is expected to lie in a range between 40% and 80% of assets.

Lower risk assets include domestic and international government and corporate bonds, money market instruments and cash or near cash instruments. Exposure to lower risk assets may be achieved directly, through investment in bonds and money market instruments, or indirectly, through collective investment schemes.

Higher risk assets include mainly domestic and international equities; there may also be a varied level of exposure to property, commodities and absolute return strategies. Exposure to these higher risk assets will be achieved indirectly through collective investment schemes, listed securities or directly through equities as applicable.

There may be times where the collective investment schemes which the Sub-Fund invests in will almost exclusively be index-tracking schemes managed by Legal & General.

The Sub-Fund may also invest in liquid investments, such as money market instruments, deposits, cash or near cash instruments and government issued debt securities, to keep the total market exposure consistent with the risk profile of the Sub-Fund.

The Sub-Fund may invest more than 35% of the scheme property in government and public securities issued or guaranteed by a single issuer.

The Sub-Fund may also use spot and forward foreign exchange instruments to manage currency exposure.

There are no geographical restrictions on the countries of investment.

Derivatives may be used for Efficient Portfolio Management only.

Performance

	Period of R&A (%)	1 yr (%)	3 yrs (%)	5 yrs (%)	Since Launch (%)
True Potential Global Managed (Acc)	14.55	14.54	10.66	7.72	6.77
Morningstar UK Moderate Target Allocation Index	11.29	12.57	9.92	6.67	6.15

Source: Morningstar, 31 October 2025, net of fees (annualised). Sub-Fund Inception: 23 November 2018.

The Global Managed Fund delivered a 14.55% return, outperforming the Morningstar Index by 3.26%. The Sub-Fund's benefitted from a pro-risk positioning during the tariff turbulence and heightened geopolitical tensions.

An overweight allocation to global equities and global high yield bonds were the main positive contributors. Within equities, overweights to Europe, the UK, Emerging Markets and Japan—all of which delivered double-digit gains. US equities, held at a neutral allocation, also performed strongly, supported by robust earnings growth, AI-related momentum, and signs of monetary policy easing.

Global sovereign bonds further enhanced returns, as easing inflation pressures—which remained contained despite the tariff impact—enabled central banks to lower interest rates, supporting mid-single-digit gains.

Sub-Investment Manager's report (continued)**Sub-Investment Activities**

Portfolio changes enhanced the Sub-Fund's regional diversification, with greater emphasis on markets outside the US. Emerging Markets were a key addition.

Within US equities, exposure to the S&P 500 Equal-Weight Index was rotated into the Market-Cap Index, providing greater exposure to companies with stronger earnings momentum.

Fixed income positioning was adjusted as inflation, interest rate, and supply–demand dynamics evolved. The Sub-Fund added US Treasuries, supported by a more benign inflation outlook and policy actions aimed at containing yields. Later in the period, we re-entered long-dated UK index-linked gilts following earlier sales, reflecting expectations of tapering quantitative tightening and renewed fiscal consolidation efforts.

In Alternatives, a temporary increase made to gold to enhance portfolio diversification and benefit from safe-haven demand amid concerns over central bank independence and geopolitical tensions.

Finally, the Sub-Fund increased Sterling hedging on US equity exposures.

Market View and Outlook

US nominal GDP remains healthy, underpinned by substantial AI investment, healthy corporate profits, a unique productivity impulse and fiscal deficits. Furthermore, a notable improvement in financial conditions combined with the prospect of lower interest rates and President Trump's frontloaded fiscal spending supports our expectation that the economic cycle will extend beyond this period.

Ex-US real GDP remains weak, although projections are again becoming modestly more optimistic, particularly in Europe. While recent US tariff actions are expected to weigh on ex-US growth, there is comparatively more room – and political will – for further fiscal stimulus outside of the US.

We favour an equity overweight via non-US equities, although alert to requirements for earnings delivery in all markets, but particularly those with more stretched valuations. Sovereign and corporate bond valuations offer limited value. A neutral view on Alternatives given the upside risks of inflation.

Risk and reward profile

The risk and reward indicator table demonstrates where the Sub-Fund ranks in terms of its potential risk and reward. The higher the rank the greater the potential reward but the greater the risk of losing money. It is based on past data, may change over time and may not be a reliable indication of the future risk profile of the Sub-Fund. The shaded area in the table below shows the Sub-Fund's ranking on the risk and reward indicator.

The Sub-Fund is in a medium category because the price of its investments have risen or fallen to some extent. The category shown is not guaranteed to remain unchanged and may shift over time. Even the lowest category does not mean a risk-free investment.

The price of the Sub-Fund and any income from it can go down as well as up and is not guaranteed. Investors may not get back the amount invested. Past performance is not a guide to future performance.

Where this Sub-Fund invests into other investment funds, they may invest in different assets, countries or economic sectors and therefore have different risk profiles not in line with those of this Sub-Fund.

Investment objectives express an intended result but there is no guarantee that such a result will be achieved. Depending on market conditions and the macro-economic environment, certain investment types and styles may perform better than others and investment objectives may become more difficult to achieve.

There may be cases where the organisation from which we buy a derivative, or an asset, fails to meet its obligations. The Sub-Fund's cash deposits are also subject to counterparty risk.

The Sub-Fund is entitled to use derivatives. Derivatives may not achieve their intended purpose. Their prices may move up or down significantly over relatively short periods of time which may result in losses greater than the amount paid.

The Sub-Fund faces non-market risk, relating to purchasing, holding and servicing the Sub-Fund's assets.

Where the Sub-Fund invests in bonds, there is a risk the bond issuer may fail to meet its repayments. Changes in interest rates, inflation and the creditworthiness of the bond issuer may also affect the bond's market value. This risk is particularly relevant where the fund invests in bonds with a lower credit rating.

The Sub-Fund may invest in securities not denominated in Sterling; the value of your investments may be affected by changes in currency exchange rates.

Certain Market conditions could make sufficiently liquid assets difficult to sell quickly at a fair price. This could result in an unpredictable fall in the value, and overall liquidity of the Sub-Fund.

The above risks may cause losses in the Sub-Fund.

+Rounded to 2 decimal places.

++The operating charges are represented by the Ongoing Charges Figure (OCF). The OCF consists principally of the ACD's periodic charge and the Investment Manager's fee which are included in the annual management charge, but also includes the costs for other services paid. It is indicative of the charges which the share class may incur in a year as it is calculated on historical data. Included within the OCF are synthetic costs which included the OCF of the underlying funds weighted on the basis of their investment proportion.

Investments carry risk. Past performance is not a guide to future performance. Investors may not get back the amount invested.

Distribution table*for the six months ended 31 October 2025***Distributions on A Accumulation shares in pence per share**

Allocation date	Share type	Distribution type	Net revenue	Equalisation	Distribution current period	Distribution prior period
28.02.26	group 1	interim	2.015	–	2.015	1.669
28.02.26	group 2	interim	1.172	0.843	2.015	1.669

Equalisation

Equalisation applies only to group 2 shares. It is the average amount of revenue included in the purchase price of group 2 shares and is refunded to holders of these shares as a return of capital. Being capital, it is not liable to income tax in the hands of the shareholder but must be deducted from the cost of shares for capital gains tax purposes.

Accumulation distributions

Holders of accumulation shares should add the distributions received thereon to the cost of the shares for capital gains tax purposes.

Interim distributions:

Group 1

Shares purchased before 1 May 2025

Group 2

Shares purchased 1 May 2025 to 31 October 2025

Reporting dates	30 April	Annual	All Sub-Funds
	31 October	Interim	All Sub-Funds

Buying and selling shares

The property of the Sub-Funds is valued at 3pm on each business day, with the exception of the last business day prior to any bank holiday in England or Wales where the valuation may be carried out at a time agreed in advance between the ACD and the Depositary and the prices calculated at the same time. Share dealing is on a forward basis i.e. investors can buy and sell shares at the next valuation point following receipt of the order.

The minimum initial investment and holding apply to the Sub-Funds as follows:

Minimum initial Investment and holding	
A Income shares	£1
A Accumulation shares	£1
B Income shares*	£100,000
B Accumulation shares*	£100,000

* Share class not currently available for investment.

The minimum initial and subsequent investment amounts, minimum holding requirements and the preliminary and redemption charges may be waived by the ACD at its discretion. Further details of this can be found within the prospectus.

Further Information (continued)

Benchmark

True Potential Allianz Cautious, True Potential Growth-Aligned Cautious

The Sub-Fund's performance can be assessed by comparison to the Morningstar UK Moderately Cautious Target Allocation Index (as a comparator benchmark). The benchmark may be used as a guide to compare and assess the performance of the Sub-Fund. Our aim is to help you monitor how your investment is performing. The ACD considers this is an appropriate comparator benchmark, given the multi asset nature and relative risk profile of the Sub-Fund. The Sub-Fund does not use the benchmark as a target, nor is the Sub-Fund constrained by it. The mix of assets in the Sub-Fund may vary from those of the benchmark (and its constituents). Accordingly, it should be used for reference purposes only.

True Potential Allianz Balanced, True Potential Growth-Aligned Balanced, True Potential Global Managed

The Sub-Fund's performance can be assessed by comparison to the Morningstar UK Moderate Target Allocation Index (as a comparator benchmark). The benchmark may be used as a guide to compare and assess the performance of the Sub-Fund. Our aim is to help you monitor how your investment is performing. The ACD considers this is an appropriate comparator benchmark, given the multi asset nature and relative risk profile of the Sub-Fund. The Sub-Fund does not use the benchmark as a target, nor is the Sub-Fund constrained by it. The mix of assets in the Sub-Fund may vary from those of the benchmark (and its constituents). Accordingly, it should be used for reference purposes only.

True Potential Allianz Growth, True Potential Growth-Aligned Growth

The Sub-Fund's performance can be assessed by comparison to the Morningstar UK Moderately Adventurous Target Allocation Index (as a comparator benchmark). The benchmark may be used as a guide to compare and assess the performance of the Sub-Fund. Our aim is to help you monitor how your investment is performing. The ACD considers this is an appropriate comparator benchmark, given the multi asset nature and relative risk profile of the Sub-Fund. The Sub-Fund does not use the benchmark as a target, nor is the Sub-Fund constrained by it. The mix of assets in the Sub-Fund may vary from those of the benchmark (and its constituents). Accordingly, it should be used for reference purposes only.

True Potential Growth-Aligned Defensive

The Sub-Fund's performance can be assessed by comparison to the Morningstar UK Cautious Target Allocation Index (as a comparator benchmark). The benchmark may be used as a guide to compare and assess the performance of the Sub-Fund. Our aim is to help you monitor how your investment is performing.
