

True Potential Schroders Cautious Income

30 January 2026

Fund objective

The investment objective of the Fund aims to deliver a total return in excess of inflation (UK Consumer Price Index) while aiming to provide an income of 3-5% per year on average, over rolling 5-year periods (net of fees).

January Update

Global equities rose in January, supported by solid corporate earnings and expectations for further interest rate cuts from the US Federal Reserve. Emerging Market (EM) equities significantly outpaced their developed market counterparts. In developed markets, UK and European shares outperformed, while small caps did well as the rally broadened. In fixed income, US Treasuries proved a laggard amid rising yields.

The True Potential Schroders Cautious Income Fund returned 2.58% (net of fees), with the Fund's exposure to gold miners and energy shares driving returns within the equity segment. The allocation to the Schroder ISF Global Gold USD Fund was the most notable contributor over the period, followed by the exposure to the SISF Global Energy I Fund. A large allocation to the Man GLG Income Fund also performed well. Conversely, the Fund's exposures to the Schroder Income Maximiser Fund and the Jupiter UK Multi Cap Income Fund underperformed global equities yet still produced a positive absolute return over the month. The allocation to alternatives did well and outperformed sovereign bonds, supported by solid gains from gold and a large exposure to the QSM Global Equity Long/Short Fund. Elsewhere, the allocation to fixed income produced slight gains in absolute terms.

Growth of £10,000 invested 5 years ago

Why invest in this fund?

- For investors looking to invest for the long term (5 years or more).
- Diversifies risk by investing in stocks and bonds.
- The cautious strategy prioritizes steady growth with a reduced risk of short-term losses, making it more suitable for investors seeking stability during market fluctuations.

What is the benchmark for this fund?

The benchmark for this fund is Consumer Price Index (UK CPI). The benchmark may be used as a guide to compare and assess the performance of the Fund. This fund uses the UK CPI which measures the rate of inflation in the UK, reflecting changes in the prices of a broad range of goods and services. By comparing the fund's performance against the UK CPI, the fund aims to ensure its returns outpace inflation, thereby maintaining the real value of investors' capital over time. Our aim is to help you monitor how your investment is performing. The Fund uses the benchmark as a target. The Fund is not constrained by it.

Key fund information

Accumulation shares: this type of share reinvests the income generated by its underlying assets (such as dividends or interest) back into the fund, rather than paying it out to shareholders as income.

Income shares: this type of share pays out the income generated by the fund's underlying assets (such as dividends or interest) directly to investors, rather than reinvesting it back into the fund.

Fund details	Accumulation shares	Income shares

* The 12 month yield reflects distributions declared over the past 12 months, as a percentage of the latest share/unit price. Investors may be subject to tax on their distributions. Yield as at 30 Jan 2026. Source: True Potential Administration LLP.

**OCF payable can fluctuate over time as the underlying investments are variable and can change. The OCF figure is sourced from the Key Investor Information Document (KIID) dated 16 Dec 2025 found at www.truepotential.co.uk/fund-documents.

Who is this fund suitable for?

This fund is suitable for all investors under the advice of a professional advisor, or investing through the True Potential Portfolios. The minimum recommended holding period is 5 years. Please be aware there is no guarantee that the fund will meet its investment objectives. The Fund is available to those that do not need a capital guarantee and are aware that their capital is at risk. Clients who are unable to bear loss of capital should not invest in this Fund.

What are the fees associated with investing in this fund?

The OCF of this fund is currently 1.07%. This means that if you invest £1000 in the fund, you can expect to pay £10.70 in fees over the course of a year. The fees you pay are pro-rata. If you hold the fund for less than a year you will only pay the proportional amount of fees applicable (based on the duration of your investment).

Risks

The following are some of the key risks associated with investing in this Fund. For a complete list of risks, please refer to the Fund's prospectus, available at www.truepotential.co.uk/fund-documents. **Please be aware that there is no guarantee that capital will be preserved.**

Risk type	Description
Investment Fund Risk	This Fund invests into other investment funds, they may invest in different assets, countries or economic sectors and therefore have different risk profiles not in line with those of this Fund.
Performance Risk	Investment objectives express an intended result but there is no guarantee that such a result will be achieved. Depending on market conditions and the macro-economic environment, certain investment types and styles may perform better than others and investment objectives may become more difficult to achieve.
Emerging Market Risk	Investments in emerging markets may involve greater risks due to political and economic instability, and underdeveloped markets and systems.
Counterparty Risk	There may be cases where the organisation from which we buy a derivative, or an asset, fails to meet its obligations. The Fund's cash deposits are also subject to counterparty risk.
Derivative Risk	The Fund is entitled to use derivatives. Derivatives may not achieve their intended purpose. Their prices may move up or down significantly over relatively short periods of time which may result in losses greater than the amount paid.
Operational Risk	The Fund faces non-market risk, relating to purchasing, holding and servicing the Fund's assets.
Credit Risk	Where the Fund invests in bonds, there is a risk the bond issuer may fail to meet its repayments. Changes in interest rates, inflation and the creditworthiness of the bond issuer may also affect the bond's market value. This risk is particularly relevant where the fund invests in bonds with a lower credit rating.
Exchange Rate Risk	The Fund may invest in securities not denominated in GBP. The value of your investments may be affected by changes in currency exchange rates.
Investment Trust Risk	Investment trusts and closed ended funds may borrow to purchase additional investments. This can increase returns when stock markets rise but will magnify losses when markets fall. The value of an investment trust or a closed-ended fund moves in line with stock market demand and its share price may be less than or more than the net value of the investments it holds.
Liquidity Risk	Certain market conditions could make sufficiently liquid assets difficult to sell quickly at a fair price. This could result in an unpredictable fall in the value, and overall liquidity of the Fund.
