

True Potential Cautious Portfolio

Portfolio Objective

The objective of the True Potential Cautious Portfolio is to provide investors with a way to achieve their investment goals. The Portfolio offers full exposure to different manager styles within the Cautious risk profile. We review the Portfolio monthly and, if necessary, rebalance to the allocation of styles that we believe offers the best opportunity for growth within the Cautious risk profile. The Portfolio aims to produce a higher risk-adjusted outcome at a lower average cost, compared to an equally-weighted model of Cautious funds.

Risk Profile: Cautious

The Cautious Investor may be sensitive to short-term losses. A Cautious Investor's potential aversion to losses could compel them to shift into a more stable investment if significant short-term losses occur. Analysing the risk-return choices available, a Cautious Investor is usually willing to accept somewhat lower returns in order to assure greater safety of his or her investment.

Ongoing Charge Figure (OCF)*: 0.78%

There are no entry or exit charges.

Investment Commentary

The True Potential Cautious Portfolio returned +3.41% in December 2023, net of Portfolio OCF.

We experienced the second consecutive month of strong asset market returns to close out the calendar year. The key drivers of returns were further signs of falling inflation across developed markets, which gave investors greater optimism Central Banks have reached peak interest rates and have scope to reduce rates through 2024. The magnitude of cuts expected in 2024 increased over December. Whilst Central Bankers aimed to manage these market expectations, recognising inflation across the UK, Europe and US is running ahead of target (2.0%), a more dovish tone was stuck by the US Federal Reserve.

Within the portfolio, stronger performing funds included True Potential 7IM and True Potential SEI Cautious. The 7IM fund benefited from its large bond allocation, including both government and corporate bonds, while returns for the SEI fund were supported by its larger allocation to equities, including the mix of factors within that allocation, as well as its allocation to long maturity inflation-linked bonds in the UK.

Over the period, no changes were made to the Portfolio manager allocations after agreement that the allocations are optimally positioned in line with our longer-term market outlook. However changes have been made at the underlying fund level. Examples include additions to European equities, where lower valuations are seen as attractive, as well as additions to lower quality corporate bonds globally as managers looked to access the high yields on offer where managers have moved less cautious on the economic environment.
