

True Potential Defensive Portfolio

Portfolio Objective

The objective of the True Potential Defensive Portfolio is to provide investors with a way to achieve their investment goals. The Portfolio offers full exposure to different manager styles within the Defensive risk profile. We review the Portfolio monthly and, if necessary, rebalance to the allocation of styles that we believe offers the best opportunity for growth within the Defensive risk profile. The Portfolio aims to produce a higher risk-adjusted outcome at a lower average cost, compared to an equally-weighted model of Defensive funds.

Risk Profile: Defensive

The Defensive Investor may be very sensitive to short-term losses. A Defensive Investor's potential aversion to short-term losses could compel them to sell their investment and hold a zero risk investment instead if losses occur. Defensive Investors would possibly accept lower long-term return in exchange for smaller and less frequent changes in portfolio value. Analysing the risk-return choices available, a Defensive Investor is usually willing to accept a lower return in order to assure the safety of his or her investment.

Investment Commentary

The True Potential Defensive Portfolio returned +2.84% in December 2023, net of Portfolio OCF.

We experienced the second consecutive month of strong asset market returns to close out the calendar year. The key drivers of returns were further signs of falling inflation across developed markets, which gave investors greater optimism Central Banks have reached peak interest rates and have scope to reduce rates through 2024. The magnitude of cuts expected in 2024 increased over December. Whilst Central Bankers aimed to manage these market expectations, recognising inflation across the UK, Europe and US is running ahead of target (2.0%), a more dovish tone was stuck by the US Federal Reserve.

Within the portfolio, stronger performing funds included True Potential 7IM and True Potential Growth-Aligned Defensive. The 7IM fund benefited from holding the largest bond allocation, including both government and corporate bonds, while returns for the Growth-Aligned fund were supported by its large sovereign bond exposure and above average allocation to equities.

Over the period, no changes were made to the Portfolio manager allocations after agreement that the allocations are optimally positioned in line with our longer-term market outlook. However changes have been made at the underlying fund level. Examples include additions to European equities, where lower valuations are seen as attractive, as well as additions to lower quality corporate bonds globally as managers looked to access the high yields on offer where managers have moved less cautious on the economic environment.
