

True Potential Cautious Portfolio

Portfolio Objective

The objective of the True Potential Cautious Portfolio is to provide investors with a way to achieve their investment goals. The Portfolio offers full exposure to different manager styles within the Cautious risk profile. We review the Portfolio monthly and, if necessary, rebalance to the allocation of styles that we believe offers the best opportunity for growth within the Cautious risk profile. The Portfolio aims to produce a higher risk-adjusted outcome at a lower average cost, compared to an equally-weighted model of Cautious funds.

Risk Profile: Cautious

The Cautious Investor may be sensitive to short-term losses. A Cautious Investor's potential aversion to losses could compel them to shift into a more stable investment if significant short-term losses occur. Analysing the risk-return choices available, a Cautious Investor is usually willing to accept somewhat lower returns in order to assure greater safety of his or her investment.

Ongoing Charge Figure (OCF)*: 0.78%

There are no entry or exit charges.

Investment Commentary

The True Potential Cautious Portfolio returned +0.97% in February 2024, net of OCF.

February was a positive month for equity markets, with market participants encouraged by resilient economic data and corporate earnings. The US equity market was positive, albeit returns were narrowly led by the technology, consumer discretionary and industrial sectors. A rebound in Chinese stock market returns was also supportive for global portfolios, influenced by several policy decisions from the Chinese government to moderate equity market short selling and volatility, but also encouraged by decisions to lower the 5-year loan prime rate (a benchmark for mortgage rates) and strong activity levels over the Lunar New Year holiday period. High-yield corporate bonds also benefitted however Government bonds and high-grade credit markets were negative over the month, as yields moved higher with investors pushing expectations for interest rate cuts further out after stronger-than-expected US inflation data. This also led to a strengthening of the US dollar on an international trade-weighted basis.

The best performing funds in the portfolio were True Potential Close Brothers and Pictet Cautious, benefitting from their larger allocation to US technology and consumer discretionary businesses. The True Potential Schroders and 7IM Cautious funds were the poorest performing funds. Both funds were challenged by their lower allocation to US equities and higher allocations to the UK.

Over the period, no changes were made to manager allocations, however it is important to note that this is an active decision, with the team believing current positioning is optimal. Over the month, managers have made changes to their individual fund allocations. In aggregate, these include increasing exposure to Japanese equities and high-yield corporate bonds, funded from government bonds.
