

True Potential Growth Portfolio

Portfolio Objective

The objective of the True Potential Growth Portfolio is to provide investors with a way to achieve their investment goals. The Portfolio offers full exposure to different manager styles within the Capital Growth risk profile. We review the Portfolio monthly and, if necessary, rebalance to the allocation of styles that we believe offers the best opportunity for growth within the Capital Growth risk profile. The Portfolio aims to produce a higher risk-adjusted outcome at a lower average cost, compared to an equally-weighted model of Capital Growth funds.

Risk Profile: Growth

The Growth Investor may be willing to accept high risk and chance of loss in order to achieve higher returns on his or her investment. Significant losses over an extended period may prompt the Growth Investor to shift to a less risky investment.

Ongoing Charge Figure (OCF)*: 0.76%

There are no entry or exit charges.

Investment Commentary

The True Potential Growth Portfolio returned -1.56% in April 2024, net of Portfolio OCF.

Global equities struggled as a stronger US inflation impulse continued to be evident, forcing investors to recalibrate expectations for possible US interest rate cuts over the next 12 months. One of the only equity regions to buck this trend was the UK, reaching new highs during the month. GBP weakened against the US dollar, while commodity prices increased alongside strong performance from Healthcare and Financial stocks, supporting the region. Higher and stickier inflation data in the US paired with robust economic growth data led global sovereign bonds yields to move higher. UK Gilts outperformed US Treasuries and index-linked bonds outperformed nominal bonds.

Within the Portfolio, the True Potential Allianz Growth fund benefitted from the performance of the alternatives basket, in particular the fund's Dynamic Commodities strategy, which benefitted from higher energy prices. The True Potential 7IM Growth fund also performed relatively well, boosted by a higher weighting in the UK within its equity allocation, which outperformed other equity regions.

Over the period, no changes were made to the Portfolio manager allocations after agreement that the allocations are optimally positioned in line with our longer-term market outlook, however changes have been made at the underlying fund level. Examples include additions to areas of the equity market which should benefit from higher commodity prices, such as the Energy sector and the UK index, as well as to higher yielding corporate bonds in favour of government debt more sensitive to interest rate expectations.
