

# True Potential Cautious Portfolio

## Portfolio Objective

The objective of the True Potential Cautious Portfolio is to provide investors with a way to achieve their investment goals. The Portfolio offers full exposure to different manager styles within the Cautious risk profile. We review the Portfolio monthly and, if necessary, rebalance to the allocation of styles that we believe offers the best opportunity for growth within the Cautious risk profile. The Portfolio aims to produce a higher risk-adjusted outcome at a lower average cost, compared to an equally-weighted model of Cautious funds.

## Risk Profile: Cautious

The Cautious Investor may be sensitive to short-term losses. A Cautious Investor's potential aversion to losses could compel them to shift into a more stable investment if significant short-term losses occur. Analysing the risk-return choices available, a Cautious Investor is usually willing to accept somewhat lower returns in order to assure greater safety of his or her investment.

**Ongoing Charge Figure (OCF)\*:** 0.79%

## Investment Commentary

The True Potential Cautious Portfolio returned +0.82% for the month of May.

May provided a strong backdrop for multi-asset investment with positive returns from both equities and fixed income. Investors were comforted with US inflation reasserting its downward path and corporate earnings continuing to surpass expectations. Regionally, US equities outperformed with US technology stocks providing outsized gains, due to investor enthusiasm over the prospects for artificial intelligence. Within fixed income, US Treasury yields declined as economic activity showed further signs of normalising. The Pound strengthened against the US dollar, +2%, as UK interest rates were recalibrated after the stronger than expected UK inflation report.

Within the Portfolio, the True Potential Growth Aligned Cautious fund provided strong returns. The fund's larger representation to equities was beneficial in a period of relatively strong equity markets.

Over the period, no changes were made to the manager allocations within the Portfolio with the team believing that the positioning is optimal. The True Potential manager cohort actively updated their positioning over the months. Some examples include a view that equity market returns will broaden regionally with additions taking place to UK equities. High yield bonds remain in focus with further additions taking place on the view that elevated yield levels and a strong global economy mean the asset class is attractive right now.
