

True Potential Balanced Income Portfolio

Portfolio Objective

The objective of the True Potential Balanced Income Portfolio is to provide investors with a way to draw a secure, regular and growing income. The Portfolio offers exposure to a select group of investment partners and a range of risk profiles (Cautious to Growth), whilst remaining within the Balanced risk profile. We review the Portfolio monthly and, if necessary, rebalance to the allocation of styles we believe offers the best potential for yield within the Balanced risk profile. The Portfolio aims to produce a higher than average yield, compared to an equally-weighted model of True Potential Wealth Strategy income funds.

Risk Profile: Balanced

The Balanced Investor may be somewhat concerned with short-term losses and may shift to a more stable option in the event of significant losses. The safeties of investment and return are typically of equal importance to the Balanced Investor.

Ongoing Charge Figure (OCF)*: 0.80%

There are no entry or exit charges.

Launch Date: 1st October 2015

Yield as of: 30 April 2024** 3.67%

Please refer to the Fund Prospectus and Key Investor Information Document (KIID) for more information.

*OCF payable can fluctuate over time as the underlying investments are variable and can change.

**Income subject to revision in the current market environment.

Yield figure indicated on this page is the forward looking 12-month yield, net of charges and UK withholding tax.

Personal dividend tax charges may still apply and is subject to individual circumstances.

Tax rules may change in the future.

*Under the current Packaged Retail Insurance and Investment Products (PRIIPS) guidance we consider all ongoing charges including those from closed ended vehicles such as investment trusts in the OCF (Ongoing Charges Figure) calculation. We use investment trusts to gain access to certain asset classes, such as infrastructure, their closed ended structure being an important feature in such asset classes. The return an investor earns from investing in an investment trust is determined by the performance of its share price. This is a disclosure change and the cost of investing in the fund does not change.

Investment Commentary

The True Potential Balanced Income Portfolio returned -0.65% in April 2024, net of Portfolio OCF.

Global equities struggled as a stronger US inflation impulse continued to be evident, forcing investors to recalibrate expectations for possible US interest rate cuts over the next 12 months. One of the only equity regions to buck this trend was the UK, reaching new highs during the month. GBP weakened against the US dollar, while commodity prices increased alongside strong performance from Healthcare and Financial stocks, supporting the region. Higher and stickier inflation data in the US paired with robust economic growth data led global sovereign bonds yields to move higher. UK Gilts outperformed US Treasuries and index-linked bonds outperformed nominal bonds.

Within the Portfolio, True Potential Schroder Cautious Income and True Potential Threadneedle Monthly Income were the two best performing funds, both benefited from their higher allocations to UK equities. The Schroder fund also benefited from the price of gold rising by 2.5%, with exposure to both the physical metal and to equities of gold mining companies.

Over the period, no changes were made to the Portfolio manager allocations after agreement that the allocations are optimally positioned in line with our longer-term market outlook, however changes have been made at the underlying fund level. Examples include additions to areas of the equity market which should benefit from higher commodity prices, such as the Energy sector and the UK index, as well as to higher yielding corporate bonds in favour of government debt more sensitive to interest rate expectations.
