

# True Potential Cautious + Portfolio

## Portfolio Objective

The objective of the True Potential Cautious + Portfolio is to provide investors with a way to achieve their investment goals. The Portfolio offers exposure to a select group of investment partners and a range of risk profiles (Defensive to Aggressive), whilst remaining within the Cautious risk profile. We review the Portfolio monthly and, if necessary, rebalance to the allocation of styles that we believe offers the best opportunity for growth within the Cautious risk profile. The Portfolio aims to produce a higher risk-adjusted outcome at a lower average cost, compared to an equally-weighted model of Cautious funds.

## Risk Profile: Cautious

The Cautious Investor may be sensitive to short-term losses. A Cautious Investor's potential aversion to losses could compel them to shift into a more stable investment if significant short-term losses occur. Analysing the risk-return choices available, a Cautious Investor is usually willing to accept somewhat lower returns in order to assure greater safety of his or her investment.

**Ongoing Charge Figure (OCF)\*:** 0.77%

## Investment Commentary

The True Potential Cautious+ Portfolio returned +1.11% in June 2024, net of Portfolio OCF.

Global equities extended year-to-date gains with a complex interplay of elections, corporate earnings and economic activity influencing returns. US equities outperformed once again benefiting from the large allocation to technology with the ongoing secular trend in artificial intelligence. Equity breadth remained exceptionally low. European equities saw declines after France called a snap election. The prospect of a far-right majority resulted in significant losses in banks. UK Equities also underperformed global equities given its higher allocation to cyclical sectors such as energy, materials and financials. The low allocation to technology was also a headwind to relative returns. Fixed income was a positive contributor to overall returns. Within sovereign bonds, longer dated paper performed best, with 30 year issues outperforming their shorter counterparts.

The True Potential UBS Growth fund provided some of the strongest returns benefitting from a large representation to US equities and their longer dated sovereign fixed income allocation.

During the period, the True Potential SEI Defensive fund was increased at the expense of the True Potential 7IM Defensive fund. This reduces fixed income duration and therefore the sensitivity of the portfolio to moves in interest rates.
