Risk and Reward Profile

The Risk and Reward Indicator demonstrates where the Fund ranks in terms of its potential risk and reward. The higher the rank the greater the potential reward but the greater the risk of losing money. It is based on past data, may change over time and may not be a reliable indication of the future risk profile of the Fund. The shaded area in the table below shows the Fund's ranking on the Risk and Reward Indicator.

Lower risk

Typically higher rewards

The Fund is in a **medium category** because the price of its investments have risen or fallen to some extent. The category shown is not guaranteed to remain unchanged and may shift over time. Even the lowest category does not mean a risk-free investment.

The price of the Fund and any income from it can go down as well as up and is not guaranteed. Investors may not get back the amount invested. Past performance is not a guide to future performance.

Performance Risk - Investment objectives express an intended result but there is no guarantee that such a result will be achieved. Depending on market conditions and the macro-economic environment, certain investment types and styles may perform better than others and investment objectives may become more difficult to achieve.

Counterparty Risk - There may be cases where the organisation from which we buy a derivative, or an asset, fails to meet its obligations. The Fund's cash deposits are also subject to counterparty risk.

Derivative Risk - The Fund is entitled to use derivatives. Derivatives may not achieve their intended purpose. Their prices may move up or down significantly over relatively short periods of time which may result in losses greater than the amount paid.

Operational Risk - The Fund faces non-market risk, relating to purchasing, holding and servicing the Fund's assets.

Credit Risk - Where the Fund invests in bonds, there is a risk the bond issuer may fail to meet its repayments. Changes in interest rates, inflation and the creditworthiness of the bond issuer may also affect the bond's market value. This risk is particularly relevant where the fund invests in bonds with a lower credit rating.

Exchange Rate Risk - The Fund may invest in securities not denominated in GBP. The value of your investments may be affected by changes in currency exchange rates.

Liquidity Risk - Certain Market conditions could make sufficiently liquid assets difficult to sell quickly at a fair price. This could result in an unpredictable fall in the value, and overall liquidity of the Fund.

The above risks may cause losses in the Fund. For full details on risk factors for this Fund, please refer to the Prospectus.
