

True Potential Aggressive Portfolio

30 September 2025

Portfolio Objective

The objective of the True Potential Aggressive Portfolio is to provide investors with a way to achieve their investment goals. The Portfolio offers full exposure to different manager styles within the Aggressive risk profile. We review the Portfolio monthly and, if necessary, rebalance to the allocation of styles that we believe offers the best opportunity for growth within the Aggressive risk profile. The Portfolio aims to produce a higher risk-adjusted outcome at a lower average cost, compared to an equally-weighted model of Aggressive funds.

Risk and Reward Profile

Defensive	Cautious	Balanced	Growth	Aggressive
Lower Risk Potentially Lower Rewards			Higher Risk Potentially Higher Rewards	

The Aggressive Investor usually aims to maximise long-term expected returns rather than to minimise possible short-term losses. An Aggressive Investor values high returns relatively more and can tolerate both large and frequent fluctuations through time in portfolio value in exchange for a higher return over the long-term.

Investment Commentary

The True Potential Aggressive Portfolio returned +2.76% in September 2025.

Global equities rose in September (MSCI ACWI +3.7%, local) as the Federal Reserve signalled lower interest rates ahead. AI-related stocks led gains despite high valuations. US equities hit record highs (S&P 500 +3.6%) as softer labour data boosted rate-cut expectations. Market breadth stayed narrow (Equal Weight +1.1%), with AI themes dominating (NASDAQ +5.7%). Emerging markets outperformed (MSCI EM +7.2%) on strong tech and Chinese fiscal optimism, while UK (+1.8%) and Europe (+1.5%) lagged due to limited tech exposure and potential UK bank tax hikes. US bond yields fell on weak data before rebounding with stronger growth signals; UK gilt yields stayed elevated. Global Investment Grade credit (+1.1%, GBP hedged) outperformed High Yield (+0.7%), and sterling weakened (-0.4%) against the dollar. The strongest manager performance came from UBS, benefiting from positive momentum and quality factors, and holdings in gold, silver, and emerging market debt. Growth-Aligned followed, supported by allocations to US and Emerging Market equities. SEI lagged due to its allocations to value style equities and smaller companies, which both underperformed.

No manager changes were made this month, as we believe the current positioning remains appropriate. Managers remain constructive and risk-on, adding to gold and gold mining companies (UBS, Pictet) and Japanese equities (UBS, Growth-Aligned).

With investing, your capital is at risk. Investments can fluctuate in value and you may get back less than you invest. Past performance is not a guide to future performance. This factsheet is not personal financial advice.

Key Fund Information

Portfolio Details	
Launch Date	1st October 2015
Ongoing Charge Figure (OCF)*	0.70%
Portfolio Size	£1,679m
Minimum Recommended Holding Period	5 years

*OCF payable can fluctuate over time as the underlying investments are variable and can change.

Personal dividend tax charges may still apply and is subject to individual circumstances. Tax rules may change in the future.

In September 2024, the FCA updated its Packaged Retail Insurance and Investment Products (PRIIPS) guidance on how we disclose costs for closed-ended funds like investment trusts. This change is designed to give you a clearer picture of the actual costs that impact your investments. As a result, some of our fund OCFs (Ongoing Charges Figure) have significantly decreased, reflecting only the costs that directly affect the fund's assets.

What are the fees associated with investing in this Portfolio?

The OCF of this Portfolio is currently 0.70%. This means that if you invest £1000 in the Portfolio, you can expect to pay £7.05 in fees over the course of a year. The fees you pay are pro-rata. If you hold the Portfolio for less than a year you will only pay the proportional amount of fees applicable (based on the duration of your investment).

Risks

The following are some of the key risks associated with investing in this Portfolio. For a complete list of risks, please refer to each Fund's prospectus, available at www.truepotential.co.uk/fund-documents. Please be aware that there is no guarantee that capital will be preserved.

Risk Type	Description
Performance Risk	Investment objectives express an intended result but there is no guarantee that such a result will be achieved. Depending on market conditions and the macro-economic environment, certain investment types and styles may perform better than others and investment objectives may become more difficult to achieve. Whilst different investment types and styles are used, growth cannot be guaranteed.
Counterparty Risk	There may be cases where the organisation from which we buy a derivative, or an asset, fails to meet its obligations. The cash deposits of the underlying funds are also subject to counterparty risk.
Emerging Market Risk	Investments in emerging markets may involve greater risks due to political and economic instability, and underdeveloped markets and systems.
Derivative Risk	The Portfolio holds funds entitled to use derivatives. Derivatives may not achieve their intended purpose. Their prices may move up or down significantly over relatively short periods of time which may result in losses greater than the amount paid.
Operational Risk	The Portfolio faces non-market risk, relating to purchasing, holding and servicing the Portfolio's assets.
Credit Risk	Where the underlying Fund invests in bonds, there is a risk the bond issuer may fail to meet its repayments. Changes in interest rates, inflation and the creditworthiness of the bond issuer may also affect the bond's market value. This risk is particularly relevant where the Fund invests in bonds with a lower credit rating.
Exchange Rate Risk	The underlying funds may invest in securities not denominated in GBP. The value of your investments may be affected by changes in currency exchange rates.
Liquidity Risk	Certain market conditions could make sufficiently liquid assets difficult to sell quickly at a fair price. This could result in an unpredictable fall in the value, and overall liquidity of the funds held within the Portfolio.
Investment Trust Risk	Investment trusts and closed ended funds may borrow to purchase additional investments. This can increase returns when stock markets rise but will magnify losses when markets fall. The value of an investment trust or a closed-ended fund moves in line with stock market demand and its share price may be less than or more than the net value of the investments it holds.
