

# True Potential Cautious Income Portfolio

31st March 2026

## Portfolio Objective

The objective of the True Potential Cautious Income Portfolio is to provide investors with a way to achieve their investment goals. This may be total return or a regular income. The Portfolio offers exposure to a select group of investment partners and a range of risk profiles, whilst remaining within the Cautious risk profile. We review the Portfolio monthly and, if necessary, rebalance to the allocation of styles we believe offers the best potential for yield within the Cautious risk profile. The Portfolio aims to produce a higher yield compared to an equally-weighted model of True Potential Wealth Strategy income funds.

## Risk and Reward Profile

Defensive **Cautious** Balanced Growth Aggressive

Lower Risk  
Potentially Lower Rewards

Higher Risk  
Potentially Higher Rewards

The Cautious Investor may be sensitive to short-term losses. A Cautious Investor's potential aversion to losses could compel them to shift into a more stable investment if significant short-term losses occur. Analysing the risk-return choices available, a Cautious Investor is usually willing to accept somewhat lower returns in order to assure greater safety of his or her investment.

## Investment Commentary

The True Potential Cautious Income Portfolio returned -4.07% in March 2026.

Global markets sold off sharply in March following US and Israeli military action against Iran. Equities fell materially, while oil prices surged over 50% on concerns over supply disruption through the Strait of Hormuz, lifting near term inflation risks and weighing on global growth expectations. All equity regions ended the month lower. US equities were relatively resilient due to energy self sufficiency, while Japan and parts of Emerging markets saw larger drawdowns given reliance on Middle Eastern oil. European equities declined amid rising rate expectations, while in the UK, larger energy exposed companies proved more resilient. Bond markets were pressured as yields rose and rate cut expectations were removed. UK gilts underperformed, credit weakened modestly, and the US dollar strengthened defensively, while sterling edged higher against the euro.

True Potential TrinityBridge Cautious Income delivered the strongest performance, supported by a lower allocation to equities and the relative protection provided by the manager's bond selection. True Potential Goldman Sachs Income Builder also performed well, benefiting from reduced equity exposure, a focus on companies with resilient balance sheets and the relative resilience of high yield bonds. The most challenged fund was True Potential Threadneedle Monthly Income, reflecting its higher equity exposure and, despite its UK focus, the absence of direct exposure to energy companies.

Fund allocations were unchanged with the team confident in the allocation. Under the bonnet, we saw managers such as UBS and Goldman Sachs tactically moderating risk to enhance resilience against the risks of a higher inflation and slower growth environment, in line with our house view.

## Growth of hypothetical £10,000 invested since inception

## Why invest in this Portfolio?

- For investors looking to invest for the long term (5 years or more).
- Diversifies risk by investing in stocks, bonds, and alternative investments.
- The cautious strategy prioritizes steady growth whilst providing income with a reduced risk of short-term losses, making it more suitable for investors seeking stability during market fluctuations.
- Investors are able to bear losses to capital without creating significant financial hardship.

With investing, your capital is at risk. Investments can fluctuate in value and you may get back less than you invest. Past performance is not a guide to future performance. This factsheet is not personal financial advice.

## Key Fund Information

**Accumulation shares:** this type of share reinvests the income generated by its underlying assets (such as dividends or interest) back into the fund, rather than paying it out to shareholders as income.

**Income shares:** this type of share pays out the income generated by the fund's underlying assets (such as dividends or interest) directly to investors, rather than reinvesting it back into the fund.

### Portfolio Details

Launch Date	1st October 2015
Ongoing Charge Figure (OCF)*	0.81%
12 Month Yield	4.11%
Portfolio Size	£540m
Minimum Recommended Holding Period	5 years

\*OCF payable can fluctuate over time as the underlying investments are variable and can change.

Historical yield reflects distributions declared over the past 12 months, as a percentage of the latest share/unit price. Personal dividend tax charges may still apply and are subject to individual circumstances. Tax rules may change in the future.

In September 2024, the FCA updated its Packaged Retail Insurance and Investment Products (PRIIPS) guidance on how we disclose costs for closed-ended funds like investment trusts. This change is designed to give you a clearer picture of the actual costs that impact your investments. As a result, some of our fund OCFs (Ongoing Charges Figure) have significantly decreased, reflecting only the costs that directly affect the fund's assets.

## What are the fees associated with investing in this Portfolio?

The OCF of this Portfolio is currently 0.81%. This means that if you invest £1000 in the Portfolio, you can expect to pay £8.10 in fees over the course of a year. The fees you pay are pro-rata. If you hold the Portfolio for less than a year you will only pay the proportional amount of fees applicable (based on the duration of your investment).

## Risks

The following are some of the key risks associated with investing in this Portfolio. For a complete list of risks, please refer to each Fund's prospectus, available at [www.truepotential.co.uk/fund-documents](http://www.truepotential.co.uk/fund-documents). Please be aware that there is no guarantee that capital will be preserved.

Risk Type	Description
Performance Risk	Investment objectives express an intended result but there is no guarantee that such a result will be achieved. Depending on market conditions and the macro-economic environment, certain investment types and styles may perform better than others and investment objectives may become more difficult to achieve. Whilst different investment types and styles are used, growth cannot be guaranteed.
Counterparty Risk	There may be cases where the organisation from which we buy a derivative, or an asset, fails to meet its obligations. The cash deposits of the underlying funds are also subject to counterparty risk.
Emerging Market Risk	Investments in emerging markets may involve greater risks due to political and economic instability, and underdeveloped markets and systems.
Derivative Risk	The Portfolio holds funds entitled to use derivatives. Derivatives may not achieve their intended purpose. Their prices may move up or down significantly over relatively short periods of time which may result in losses greater than the amount paid.
Operational Risk	The Portfolio faces non-market risk, relating to purchasing, holding and servicing the Portfolio's assets.
Credit Risk	Where the underlying Fund invests in bonds, there is a risk the bond issuer may fail to meet its repayments. Changes in interest rates, inflation and the creditworthiness of the bond issuer may also affect the bond's market value. This risk is particularly relevant where the Fund invests in bonds with a lower credit rating.
Exchange Rate Risk	The underlying funds may invest in securities not denominated in GBP. The value of your investments may be affected by changes in currency exchange rates.
Liquidity Risk	Certain market conditions could make sufficiently liquid assets difficult to sell quickly at a fair price. This could result in an unpredictable fall in the value, and overall liquidity of the funds held within the Portfolio.
Investment Trust Risk	Investment trusts and closed ended funds may borrow to purchase additional investments. This can increase returns when stock markets rise but will magnify losses when markets fall. The value of an investment trust or a closed-ended fund moves in line with stock market demand and its share price may be less than or more than the net value of the investments it holds.
